The 6th ISTAP International Seminar on Tropical Animal Production

“Integrated Approach in Developing Sustainable Tropical Animal Production”

PROCEDINGS

PART I

October 20-22, 2015
Yogyakarta Indonesia

Published by:
Faculty of Animal Science, Universitas Gadjah Mada Yogyakarta, Indonesia, 2015
LIST OF CONTENTS

PREFACE ....................................................................................................................................iii
REPORT FROM ORGANIZING COMMITTEE.................................................................iv
WELCOME ADDRESS.................................................................................................v
OPENING REMARKS .............................................................................................vi
LIST OF CONTENTS.................................................................................................vii

PLENARY SESSION

1. Strategies to Increase the Domestic Production of Raw Milk in Indonesia and Other South East Asian Countries
   John Moran and Phillip Morey ..................................................................................1-11

2. Nutritional Challenges of Lactating Dairy Cattle in a Tropical Climate
   J. K. Bernard ...........................................................................................................12-17

3. Feed, Land, and Landscape for Sustainable Animal Production
   Shaukat A. Abdulrazak a and Isaac M. Osugab .........................................................18-18

4. Food Safety Regulation and Halal Food Issues in Indonesia
   Roy Sparringa ........................................................................................................19-19

5. Extension System for Livestock Development in Developing Countries:
   Knowledge Management Application
   Budi Guntoro ........................................................................................................20-27

6. Structural Development of Livestock Farms in a Global Perspective
   Henning Otte Hansen ............................................................................................28-50

7. Whole Farm Problems with Heat Stress – It’s Not Just for Lactating Dairy Cows
   Allen Young ........................................................................................................51-57

LEAD PAPER

1. Antimicrobial Peptides Expression for Defense System in Chicken Gastrointestinal and Reproductive Organs
   Yukinori Yoshimura, Bambang Ariyadi, and Naoki Isobe .......................................58-60

2. Improving Technology Adoption and Sustainability of Programs to Increase Bali Cattle Productivity in West Nusa Tenggara Province, Indonesia
   Yusuf A. Sutaryono, T. Panjaitan, and Dahlanuddin .............................................61-66

3. The Role of Family Poultry Systems in Tropical Countries
   Yusuf L. Henuk, Monchai Duangjinda, and Chris A. Bailey .....................................67-71
SUPPORTING PAPERS

Part I

Animal Feed and Nutrition

1. NM-03-P The Marl and Kaolin in Broiler Diet: Effects on the Bone Weight and the Cutting Yield
   D. Ouachem, A. Meredef, and N. Kaboul
   72-75

2. NM-04-P The Effect of Liquid Nanocapsule Level on Broiler Fat Quality
   Andri Kusmayadi, Zuprizal, Supadmo, Nanung Danar Dono, Tri Yuwanta, Ari Kusuma Wati, Ronny Martien, Sundari
   76-79

3. NM-05-O Production and Egg Quality of Quail Layer Given Diets Containing Different Levels of Crab (Portunus pelagicus) by-Product Meal
   K.G. Wiryawan, Syamsuhaidi, D.K. Purnamasari, and T.S. Binetra
   80-84

4. NM-08-P A Preliminary Study on the Use of Enzyme and Organic Acids in Rice Bran-containing Diet at Two Levels of Dietary Protein for Rabbit
   Tuti Haryati and Yono C. Raharjo
   85-89

5. NM-09-O Efficacy of Toxin Binder in Reducing Induced Aflatoxin B and Ochratoxin A in Broiler Feed
   Anjum Khalique, Muhammad Umer Zahid, Jibran Hussain, Zahid Rasool
   90-93

6. NM-10-O Evaluation of Local Feed in Broiler Diets in Small Scale Farm in Palu Central Sulawesi
   Hafsah, Hidayat, Fatmawati, M. Sagaf, Mappiratu, and T. Sapan
   94-99

7. NM-11-O Digestibility and Nutritional Value of Gedi (Abelmoschus manihot (L.) Medik) Leaves Meal in the Diet of Broilers
   Jet Saartje Mandey, Hendrawan Soetanto, Osfar Sjofjan, Bernat Tulung
   100-104

8. NM-12-O Utilization of Skipjack Tuna (Katsuwonus pelamis L.) Gill in Diet as a Source of Protein on Carcass Quality of Broiler Chickens
   Jein Rinny Leke, Jet S. Mandey, Meity Sompie, Fenny R. Wolayan
   105-109

9. NM-13-O The Dynamics of Indigenous Probiotics Lactic Acid Bacteria on Growth Performance, Total Adherence Bacteria, and Short-Chain Fatty Acids Production in the Ileum of Male Quail
   Sri Harimurti, Sri Sudaryati and Bambang Ariyadi
   110-110
10. NM-14-O  Selection of Human-origin Lactobacillus Strains as Probiotics with Capability in Synthesizing Conjugated Linoleic Acid and Alleviating Hyperglycemia in Rats (Rattus norvegicus) in Vivo
    Widodo, Pradipta Ayu Harsita, Samuel Aditya, Nosa Septiana Anindita, Tutik Dwi Wahyuningsih and
    Arief Nurrochmad.................................................................111-116

    Lilik Retna Kartikasari, Adi Magna Patriadi Nuhriawangs, Winny Swastike and Bayu Setya Hertanto...............117-117

12. NM-16-O  Performance of Japanese Quails Fed Different Protein Levels and Supplemented with Betaine
    Adi Ratriyanto, Rysca Indreswari, Adi Magna Patriadi Nuhriawangs, Apriliana Endah Haryanti....................118-122

13. NM-17-O  The Influence of Vitamin D3 Levels on Diets with Phytase on Production Performance of Layer Quail (Coturnix coturnix japonica)
    Adi Magna Patriadi Nuhriawangs, Adi Ratriyanto, Winny Swastike, Rysca Indreswari, Ahmad Pramono and Try Haryanto.............123-126

14. NM-20-O  Phytobiotics Habbatus Sauda and Garlic Meal: Are Still Efficacious During the Spread of Marek’s Disease Outbreak?
    N.D. Dono, E. Indarto, Kustantinah, Zuprizal.............................................127-131

15. NM-22-O  The Effect of Dietary Calcium and Phosphorus Level on Serum Mineral Contents of the Bantul Local Duck within a Day
    H. Sasongko, T. Yuwanta, Zuprizal, Supadmo, and I. Widiyono.........................................................132-132

16. NR-01-P  Suplementation Local Feed Urea Gula Air Multinutrient Block and Different Levels of Sulphur for Increase Lactation Productivity Doe Also Decrease Kid Mortality Bligon Goat Grazed at Timor Savannah
    Arnold E. Manu, Yusuf L. Henuk, H.L.L.Belli, M.M. Kleden......133-137

17. NR-02-P  Methane Production and Rumen Fermentation Characteristics of Buffalo Ration Containing Sorghum Silage with Rumen Simulation Technique (RUSITEC) Methods
    Teguh Wahyono, Dewi Apri Astuti, Komang G. Wiryawan, Irawan Sugoro, Suharyono.........................................................138-142

18. NR-04-O  Body Weight Gain Response of Sumba Ongole Cattle to the Improvement of Feed Quality in East Sumba District, East Nusa Tenggara, Indonesia
    Debora Kana Hau and Jacob Nulik.........................................................143-146
19. NR-05-O Daily Body Weight Gain of Bali Cattle Fed with Leucaena Leucocephala as the Main Ration in West Timor, East Nusa Tenggara, Indonesia
   Jacob Nulik and Debora Kana Hau…………………………………………………………..147-150

20 NR-06-O Tannin Anthelmintic Doses, Metabolizable Energy and Undegraded Protein Contents of Rubber Leaves (Hevea brasiliensis) as Herbal Nutrition for Goats
   Sri Wigati, Maksudi Maksudi, Abdul Latief and Eko Wiyanto ..151-155

21. NR-07-P Consumption and Digestibility of Nutrients in Bali Cattle at the Last Period of Pregnancy Kept under Semi Intensive System Supplemented with Nutritive Rich Feed Contained Lemuru Oil and Zinc
   Erna Hartati, E.D. Sulistijo, A. Saleh………………………………………………………156-160

22. NR-08-P Preliminary Screening for Anthelmintic Potential of Sesbania grandiflora Leaves for Parasitic Infected Goats in Short-Term Trial
   Mohd Azrul Lokman, Kanokporn Phetdee, Sathaporn Jittapalapong and Somkiert Prasanpanich………………………………………………161-165

23. NR-09-O The Effect of Urea Treated Straws and Urea-Molasses Feed Blocks (UMB) on Reproductive Performance of Libyan Barbary Sheep
   Mabruk, H.S., H. A. Salim, A. E. Benshaban, A.E. Ahtash, H.E. Daeky and Z.N. Elmeshabic……………………………………166-172

25. NR-11-O Chemical Composition, Antioxidant Compounds and Antioxidant Capacity of Ensiled Coffee Pulp

26. NR-12-O Influence of Starch Type as Substrate Material in Dry Lactic Acid Bacteria Inoculant Preparation on Fermentation Quality and Nutrient Digestibility of King Grass Silage
   B. Santoso, B. Tj. Hariadi and Jeni…………………………………………………………182-186

27. NR-13-O Responses of Growing-Female Crossbred Ettawa Goats Fed Concentrates Containing by product of Traditional Fried Snack Industry with Different Levels of Urea
   A. R. S. Asih, K G. Wiryawan, I. N. Sadia, and Kertanegara………..187-190
28. NR-14-O  Restriction Feed and Refeeding Evaluation for Consumption, Feed Cost, Income Over Feed Cost, Percentage of Carcass and Meat Quality Kacang Goat
   Bambang Suwignyo, Miftahush Shirothul Haq, Setiyono, and Edi Suryanto
   ..........................................................................................................................191-197

29. NR-15-O  Characteristics of polyunsaturated fatty acids and nutrient digestibility feed cattle of the fermented rumen fluid by one and two stage in vitro
   Riyanto, J. E. Baliarti, T. Hartatik, D.T. Widayati
   and L. M. Yusiaty
   ..........................................................................................................................198-202

30. NR-16-P  Performance and Economic Efficiency of young Anglo-Nubian Goat Fed Different Protein and Energy
   I-G.M.Budiarsana, Supriyati and L. Praharani
   ..........................................................................................................................203-207

31. NR-17-P  Effect of Choline Chloride Supplementations on Productive Performance of Ettawa Crossbred Goats
   Supriyati Kompiang, I Gusti Made Budiarsana, Rantan Krisnan, Lisa Praharani
   ..........................................................................................................................208-212

32. NR-18-O  Body Weight Gain of Donggala Bull Given Supplement Feed on Basis of Cocoa Pod Husks Fermentation
   F.F. Munier, Mardiana Dewi, and Soeharsono
   ..........................................................................................................................213-217

33. NR-19-O  Influence of Cellulolytic Bacteria from Rumen Fluid on In Vitro Gas Production of Robusta Coffee Pulp (Coffea canephora Sp.) Fermented
   Chusnul Hanim, Lies Mira Yusiati, and Fahriza Anjaya Jazim
   ..........................................................................................................................218-222

34. NR-20-P  Growth and Productivity of Brachiaria brizantha cv MG 5 under the effect of different dose of NPK fertilization
   Nafiatul Umami, Meita Puspa Dewi, Bambang Suhartanto, Cuk Tri Noviandi, Nilo Suseno, Genki Ishigaki, Ryo Akashi
   ..........................................................................................................................223-227

35. NR-21-O  Indigofera Sp as a Source of Protein in Forages for Kacang Goat in Lactation and Weaning Period
   A. Nurhayu and Andi Baso Lompengeng Ishak
   ..........................................................................................................................228-232

36. NR-22-O  Supplementing Energy and Protein at Different Degradability to Basal Diet on Total Protozoa and Microbial Biomass Protein Content of Ongole Grades Cattle
   Dicky Pamungkas, R. Utomo, dan M. Winugroho
   ..........................................................................................................................233-237

37. NR-24-O  Nutritive Evaluation of Pineapple Peel Fermented by Cellulolytic Microbe and Lactic AcidBacteria by In Vitro Gas Production Technique
   Lies Mira Yusiaty, Chusnul Hanim and Caecilia Siska Setyawati
   ..........................................................................................................................238-242
38. NR-25-O The Supplementation of ZnSO\textsubscript{4} and Zn-Cu Isoleusinate in the Local Feed Based at Last Gestation Period on Dry Matter Consumption and Digestibility and Calf Birth Weight of Bali Cattle
   FMS Telupere, E Hartati, and A. Saleh.................................243-247

39. NR-26-P Local Micro Organisms (LOM) as an Activator to Enhance the Quality of Various Plant Waste as Feed
   Andi Ella, A. Nurhayu and A. B. Lompengeng Ishak..................248-251

40. NR-27-O Organic Acid and Inhibition of Complete Silage Ration on the Growth of Salmonella enteritidis
   Allaily, Nahrowi, M. Ridla, M. Aman Yaman............................252-256

41. NR-28-O The utilization of some feed supplement by using or without molasses on local male sheep on fermentation results in rumen liquid, daily live weight gain, production, C/N ratio and water content of feces
   Suharyono, Teguh Wahyono, C. Ellen. K and Asih Kurniawati....................257-260

42. NR-29-O Evaluation of \textit{Albaiza chinensis} as Tannins Source for in Vitro Methane Production Inhibitor Agents Sheep Rumen Liquor
   Anas, M. A., Yusiati, L. M., Kurniawati, A., Hanim, C.................261-265

43. NR-30-O Growth and Productivity of \textit{Sorghum Bicolor} (L.) Moench in Merapi Eruption Soil with Organic Fertilizer Addition
   Suwignyo, B, B. Suhartanto, G. Pawening, B.W.Pratomo...........266-270

44. NR-31-P Quality and Storability of Pelleted Cassava (\textit{Manihot utilisima}) Leaves var. Bitter
   Ristianto Utomo, Subur Priyono Sasmito Budhi, Cuk Tri Noviandi,
   Ali Agus, and Fidrais Hanafi.................................................271-274

45. NR-32-O Biomass Production of Pueraria javanica Using Rhizobium Inoculant and Urine Bali Cattle in East Borneo
   Ida Ketut Mudhita, Nafiul Umami, Subur Priyono Sasmito Budhi
   and Endang Baliarti.............................................................275-280

46. NR-33-P The Effect of Using Different Sources of Carbohydrates to Feed Efficiency on Indigenous Thin Tailed Male Lamb
   Muktiani, A, A. Purnomoadi, E. Prayitno................................281-285

47. NR-35-O Substitution of Concentrate by Protein Source Forage for Growing Heifer of Friesian Holstein (FH)
   Y. Widiawati and M. Winugroho..............................................286-290

48. NR-38-O The Use of \textit{Tricoderma sp.} as a Starter of Fermentation Dry Teak Leaves (\textit{Tectona grandis}) as Animal Feed
   Yunianta and Hartatik............................................................291-295
49. NR-39-P Nutritive Values of Rice Straw Fermentation Used Carbon Sources on Different Level With Various of Inoculant Levels *Aspergillus niger* and *Lactobacillus plantarum*
R. Agus Tri Widodo Saputro, Nono Ngadiyono, Lies Mira Yusiati, I Gede Suparta Budisatria ........................................................................................................ 296-300

50. NR-40-O The Fat Protective Effect of Fish Oil, Sunflower Seed Oil and Corn Oil on Fluid Rumen Fermentation Parameters
Agustinah Setyaningrum, Soeparno, Lies Mira Yusiati and Kustantinah .......................................................................................................................... 301-305

51. NR-41-O The Effect of Supplementation of Gliricidia or Rice Bran on Liveweight Gain, Feed Intake and Digestibility of Kacang Goat Fed Mulato Grass
Marsetyo, Damry and Mustaring .......................................................................................... 306-310

52. NR-42-P In Sacco Feeding Value of Multi-Stage Ammoniated Palm Press Fiber
Armina Fariani, Arfan Abrar and Gatot Muslim ........................................................................ 311-311

53. NR-43-O Alternative Rations to Maintain High Growth Rate of Bali Bulls Fattened with *Leucaena* Based Diet in Sumbawa, Eastern Indonesia
T. S. Panjaitan .......................................................................................................................... 312-315

54. NR-44-O The Use of Ramie By-Product (*Boehmeria nivea*) Materials as Complete Feed on the Growth and Hematology of Weaning Ettawa Cross Breed Goat
Emmy Susanti, Ali Agus, Y. Y. Suranindayah, and F. M. Suhartati .................................................................................................................. 316-320

55. NR-45-O Study on Complete Feed Fermentation of Agricultural By-Product on Performance Etaawah Goat
Yusdar Zakaria, Yurliasmi, Cut Intan Novita ............................................................................... 321-325

56. NR-46-P Carcass Production and Component of Lamb Provided Metanogenic Inhibitor Feed

**Small Ruminant, Beef Cattle, Animal Draught and Companion Animal**

57. PPO-01-O Correlation between the Slaughter Weight, Carcass Weight, with Body Measurements of Cattle in Kebumen, Central Java
Setiyono, Suharjono Triatmojo, Trisakti Haryadi, Dino Eka Putra .................................................. 331-334

58. PPO-02-O Production of Stingless Bees (*Trigona sp.*) Propolis in Various Bee Hives Design
Agus salim, Nafiatul Umami, Erwan ......................................................................................... 335-338

Selection for 10 Weeks Old Body-Weight on Sentul Chicken  
Sofjan Iskandar and Tike Sartika .................................................. 387-390

Analysis of Reproductive Potential and Hatchability of Naked Neck and Normal Hens  
Jafendi H.P. Sidadolog, Tri Yuwanta, Wihandoyo, Sri Harimurti, Sri Sudaryati, Heru Sasongko and Bambang Ariyadi ......................... 391-396

Localization and Molecular Size of Mucin2 Glycoproteins Forming the Gut Mucosal Barrier in the Indonesian Indigenous Naked Neck and Normal Feathered Chickens  
B. Ariyadi, J.H.P. Sidadolog, S. Harimurti, S. Sudaryati, and Wihandoyo ....................................................................................... 397-400

Milk Quality Of Anglo Nubian X Etawah Grade Goats And Saanen X Etawah Grade Goats At First Kidding Period  
Lisa Praharani, Supryati, and Rantan Krisnan .............................................. 401-405

Performance of Dairy Cattle with Supplementation of Rumensin, Garlic Husk (*Allium sativum*) and Organic Minerals in Ration  
Caribu Hadi Prayitno, Suwanto, and Afifah Noor Hidayah ............... 406-409

Trends of Dairy Population and Milk Production in Boyolali, Central Java, Indonesia  
N. Hidayah, B. Guntoro, E. Sulastri, Y.Y. Suranindyah ......................... 410-414

Changes in Pathogen Number during Preservation of Milk Derived from Mastitic Dairy Cows  
N. Isobe, K. Hisaeda, T. Koshiishi, M. Watanabe, H. Miyake, Y. Yoshimura ......................................................................................... 415-417

Diacylglycerol Acyltransferase1 (DGAT1) Gene Polymorphism in New Zealand Holstein Friesian Cattle under Dairy Breeding Station and Its Correlation with Milk Quality  
SA. Asmarasari, C. Sumantri, IW Mathius, A. Anggraeeni ............... 418-422

Reaction of Cathelicidin-2 secreted from goats milk leukocytes to lipopolysaccharide  
Moemi Nishikawa, Yukinori Yoshimura, and Naoki Isobe .......... 423-425
PART II

Animal Breeding and Reproduction

79. PPE-01-P Identification of Pure Breed Bali Cattle by Using Molecular Approach
Endang Tri Margawati, Indriawati, Slamet Diah Volkandari and Muhammad Ridwan........426-431

80. PPE-02-P Milk Transmitting Ability of Saanen Bucks under Intensive Management
Anneke Anggraeni.................................................................432-436

81. PPE-03-O Genetic Markers of Twinning Births of Local Beef Cattle and Its
Crossbreds in Indonesian
A. Anggraeni, S. A. Asmarasari, H. Hasinah, C. Talib and
B. Tiesnamurti.................................................................437-441

82. PPE-04-P Association of Prolactin Gene with Egg Production in PMp Ducks
T. Susanti and I. P. Sari............................................................442-446

83. PPE-05-P Microsatellite analysis of genetic diversity in Pekin, Alabio, and their
crossbred duck populations
L. Hardi Prasetyo, T. Susanti, T. Purwadaria..........................447-447

84. PPE-08-P Genotypic Profile of Ettawa Grade Goat with Different Head and Neck
Color Based on MC1R Gene
Dyah Maharani, I Gede Suparta Budisatria, Panjono, Tety Hartatik
and Slamet Diah Volkandari..................................................448-451

85. PPE-09-O Polymorphism of Promoter Prolactine Gene and Its Association with Egg
Production of Selected Indonesian Kampung Chicken (KUB)
Tike Sartika.............................................................................452-452

86. PPE-10-O Qualitative And Quantitative Traits of Kokok Balenggek Chicken, the
Rare Indigenous Chicken in West Sumatera
Firda Arlina, Hafil Abbas, Sarbaini Anwar, Jamsari.................453-457

87. PPE-11-O Phenotype Measurements of Bali Cattle Combined with Interviews
of Farmers from Multiple Locations in Indonesia as a Resource for
Development of Breeding Programs
Ann Eriksson, Endang Tri Margawati, Indriawati, Ronny Rachman
Noor, Goran Andersson, Emma M Svensson.............................458-462

88. PPE-12-O Investigating the genetic status of Bali cattle in Indonesia using large scale
genotyping
Emma Svensson, Ann Eriksson, Ida Clemensson Lindell, Endang Tri
Margawati, Rere Indriawati, Ronny Rachman Noor and
Göran Andersson.....................................................................463-463

Influence of Cellulolytic Bacteria from Rumen Fluid on in Vitro Gas Production of Fermented Robusta Coffee Pulp (*Coffea canephora sp.*)

Chusnul Hanim¹, Lies Mira Yusiatı¹, and Fahriza Anjaya Jazim¹

¹Faculty of Animal Science, Universitas Gadjah Mada
Corresponding email: c.hanim@ugm.ac.id

ABSTRACT: The experiment was done to evaluate the influence of robusta coffee pulp fermented by rumen cellulolytic bacteria on in vitro gas production. The first step of this experiment was cellulolytic inoculum production by using fluid fermentation with cellulose as substrat. The inoculum produced was then used for coffee pulp fermentation. Cellulolytic bacteria was added into 200 g coffee pulp as much as 0%, 5% and 10% based on dry matter. Each treatment had three replicates. Fermentation was carried out at room temperature during 21 days anaerobically. At the end of fermentation, samples were taken out for nutrient determination including physical, chemical qualities, and in vitro gas production. Data obtained were analyzed by one way design and continued by Duncan’s new multiple range test to examine the differences between mean values. The results showed that 5% and 10% cellulolytic bacteria addition decreased pH value, and crude fiber (CF) content as much as 12.89% and 16.32% compared to control (0% of cellulolytic bacteria). Whereas addition of 10% inoculum increased nitrogen free extract (NFE) content. However, cellulolytic bacteria addition up to 10% had no effect on crude protein (CP), extract ether (EE), dry matter (DM), organic matter (OM), glucose, and lactic acid content, as well as in vitro gas production. It could be concluded that cellulolytic bacteria addition in level 5% decreased CF content but did not give positive effect on in vitro gas production.

Keywords: Cellulolytic Bacteria, Chemical Composition, Coffee Pulp, In Vitro Gas Production

INTRODUCTION

Coffee pulp is an abundant agricultural by-product derived from wet processing of coffee berries from the coffee industry. Coffee pulp is the most important by-product of the so called wet coffee processing, as it represents about 40% of the fruit on a fresh weight basis, and 29% on a dry weight basis (Gaime-Perraud et al., 1993). Coffee pulp is the first product obtained during processing, and it represents on a dry-weight basis about 29% of the weight of the whole berry (Ellas, 1979). This may constitute a source of severe contamination and a serious environmental problem. For this reason, efforts have been made to develop methods for its utilization as a raw material for the production of feeds. Fermented coffee pulp is a valid alternative to handling and storing the huge amounts of coffee pulp.

Limitations for the use coffee pulp in animal feeding are connected to its high contents on tannins and caffeine. However, coffee pulp contains proteins, carbohydrates and minerals that may favor its utilization in animal feeding (Mazzafera, 2002). Taking into account the average contents of about 50, 10, 2.5 and 18% for carbohydrate, protein, fat and fibres, coffee pulp appear to be a useful feed supplement for animals (Orozco et al., 2008). Ellas (1979) reported the dried coffee pulp has about 10% crude protein, 21% crude fibre, 8% ash, and 44% nitrogen-free extract, as well as 1.80-8.56 % tannins, and 1.3 caffeine. Due to the presence of these compounds (caffeine,
tannins and polyphenols), these organic solid residues show toxic nature and thus have not been utilized beneficially. This has also led to the problem of environmental pollution (Parani and Eyini, 2012).

Several biological treatments including the use of microorganisms such as yeast, filamentous fungi and bacteria are being applied to improve the nutritional value of coffee pulp. Although solid-state fermentation (SSF) has been used for specific biological detoxification of coffee pulp using filamentous fungi at laboratory scale, no data on the suitability of streptomycetes for this purpose has been reported. The ability of these microorganisms to colonize agro-industrial residues and to produce a wide range of enzyme activities related with lignocellulose degradation make them good candidates for biotechnological recycling of coffee pulp (Orozco et al., 2008). In most cases, the processes have been designed to render coffee pulp suitable for animal feeding, either in the form of silage or as a dried product (Bressani, 1979). Cabezas et al., (1979) reported ensiled coffee pulp produces better performance than dehydrated pulp, due possibly to its better palatability, better digestibility, and lower content of caffeine and tannins.

In this paper, the experiments were conducted to evaluate the influence of robusta coffee pulp fermented by rumen cellulolytic bacteria on in vitro gas production. The effect of the different levels of rumen cellulolytic bacteria on chemical composition and in vitro digestibility were investigated.

**MATERIALS AND METHODS**

**Culture conditions**

Following heat sterilization (121 °C for 30 min), the enrichment medium according Omelianski (1902) cit. Skinner (1971), with cellulose as substrate, was inoculated with 10% of rumen liquor. The culture was grown at temperature 39°C, pH 7 for 7 d anaerobically under submerged culture condition. The the culture was then inoculated in growth medium according Omelianski (1902) cit. Skinner (1971), with cellulose as substrate, in the same condition with enrichment culture, and continued by inoculation for fermentation of coffee pulp. The primary bacteria in this product was cellulolytic bacteria.

**Fermentation of coffee pulp**

After growing for 7 d, the culture of cellulolytic bacteria was mixed to 200 g of air-dried coffee pulp, and incubated anaerobically at room temperature for 21 d. The culture was added to achieve final concentrations of 0, 5, or 10% based on DM of coffee pulp. The final water content of fermentation was 45% for all treatments by adding distilled water. At the end of the fermentation period, pH, glucose and lactic acid was determined. Then, sample was collected, dried at 55°C for 72 h, ground through a 1-mm screen Wiley mill and analyzed for chemical composition as well as for in vitro digestibility gas production.

**Analysis of Fermentation Parameters**

- **pH of fermentation.** pH of coffee pulp was immediately recorded using a pH meter after fermentation process.

- **Glucose content.** Glucose content was measured according procedure Nelson-Somogyi (Plummer, 1971).

- **Lactic acid content.** Lactic acid content was analyzed following Baker and Summerson method (Hawk et al., 1976)

- **Chemical composition.** The samples, before and after fermentation, were analyzed for chemical composition including dry matter (DM), organic matter (OM), crude fiber (CF), crude
protein (CP), ether extract (EE), and nitrogen free extract (NFE) according to AOAC procedure (2005). These analyses were carried out for original and fermented sample of coffee pulp to determine the effect of fermentation on chemical composition and in vitro digestibility gas production.

In vitro digestibility gas production technique. Determination of in vitro digestibility gas production technique was conducted following procedure described by Menke and Steingass (1988). In vitro incubations were carried out with rumen fluid from two fistulated Ongole Cross Breed previously fed with 40% concentrate feed (rice bran) and 60% Penicetum purpuroides at 5% body weight. The rumen liquor was collected from the beets before they were offered the morning feed into the thermo flask that had been pre-warmed to a temperature of 39°C and was squeezed through four layers of surgical gauze into an Erlenmeyer flask and flushed with CO2 in the laboratory. One part rumen fluid was mixed with two parts buffered mineral solution (1:2 volume/volume) and maintained at 39°C. Approximately 0.300 g of air-dried fermented coffee pulp of known chemical composition that was previously ground through a 1 mm screen was carefully dropped into a 100 ml glass syringe and thereafter, 30 ml this buffered rumen fluid under continuous flushing with CO2 pipetted into incubation syringes containing the ground test substrate. The syringe was tapped and pushed upward by the piston in order to completely eliminate air in the inoculums. The silicon tube in the syringe was then tightened by a metal clip so as to prevent escape of gas. Incubation was carried out at 39±1°C and the volume of gas production was measured at 1, 2, 4, 6, 8, 12, 24, 36, 48 and 72 h, and 72-h cumulative gas production in vitro measured following fitcurve method (Chen, 1994). Blanks were run in triplicates throughout the incubation process.

Experimental Design and Statistical Analysis

Treatments were arranged in a one way design, with the main factors being levels of rumen cellulolytic bacteria (containing 0, 5, or 10% DM basis). Fermentation experiments were separately conducted for each treatment with three replicates each treatment. Air-dried coffee pulp was utilized as substrate for solid state fermentation. The data were analyzed as a one way design. The differences of mean value were analyzed by Duncan’s new multiple range test (Rosner, 1990).

RESULT AND DISCUSSION

Chemical composition of fermented coffee pulp

The chemical composition including DW, OM, CP, CF, EE, and NFE of coffee pulp was 66.00%, 87.01%, 23.27%, 42.73%, 1.46%, and 19.54%, respectively. Fermented coffee pulp had low pH value 5.91, 5.81 and 5.57 with addition of 0, 5, or 10% of rumen cellulolytic bacteria respectively. Addition 10% cellulolytic bacteria decreased pH value of fermented coffee pulp significantly (P<0.05). However, it did not affect lactic acid content, those were 0.12-0.15%.

** (P<0.01)

Fermentation of coffee pulp using 5 or 10% rumen cellulolytic bacteria decreased CF content 12.89 or 16.32%, and increased NFE content 28.82 or 42.70% compare without inoculum (Table 1). The decrease of the CF content was due to inoculum had cellulases activity (data not shown).

In vitro digestibility gas production

As shown in Table 2, fermented coffee pulp with addition of cellulolytic bacteria did not show significant effect and resulted low cumulative gas production in vitro at 72-h incubation, it means low digestibility of substrate, even though CF content of fermented coffee pulp decreased.

Table 2. Cumulative gas production in vitro (ml/300mg DW), fraction a (ml/300mg DW), b (ml/300mg DW), and c (ml/h) of fermented coffee pulp with different level of rumen cellulolytic bacteria 72-h incubation

This phenomenon was due to limitations for the use coffee pulp in animal feeding are connected to its high contents on tannins and caffeine. Tannins are known to confer astringency to foodstuffs and complex proteins, affecting food digestibility and decreasing nitrogen utilization animals (Mazzafera, 2002). Getachew et al. (2004) reported some feeds, such as forage legumes and cottonseed, contain phenolics, alkaloids and saponins that have negative biological effects on microbes and reduce microbial growth in rumen. Tannins are naturally occurring polyphenolic compounds found in plants, which form complexes with feed and microbial proteins and can depress feed digestibility in the rumen.

CONCLUSION

The addition of 5% cellulolytic bacteria improved chemical composition of fermented coffee pulp especially decreased CF content.
