The 6th ISTAP International Seminar on Tropical Animal Production

"Integrated Approach in Developing Sustainable Tropical Animal Production"

PROCEEDINGS

PART I

October 20-22, 2015
Yogyakarta Indonesia

ISBN: 978-979-1215-26-8

Published by:
Faculty of Animal Science, Universitas Gadjah Mada Yogyakarta, Indonesia, 2015
# LIST OF CONTENTS

**PREFACE** .................................................................................................................................... iii
**REPORT FROM ORGANIZING COMMITTEE** ........................................................................ iv
**WELCOME ADDRESS** ........................................................................................................ v
**OPENING REMARKS** ........................................................................................................ vi
**LIST OF CONTENTS** ........................................................................................................ vii

## PLENARY SESSION

1. Strategies to Increase the Domestic Production of Raw Milk in Indonesia and Other South East Asian Countries  
   **John Moran and Phillip Morey** ............................................................................................... 1-11

2. Nutritional Challenges of Lactating Dairy Cattle in a Tropical Climate  
   **J. K. Bernard** ........................................................................................................................... 12-17

3. Feed, Land, and Landscape for Sustainable Animal Production  
   **Shaukat A. Abdulrazak a and Isaac M. Osugab** .................................................................. 18-18

4. Food Safety Regulation and Halal Food Issues in Indonesia  
   **Roy Sparringa** ......................................................................................................................... 19-19

5. Extension System for Livestock Development in Developing Countries: Knowledge Management Application  
   **Budi Guntoro** ............................................................................................................................ 20-27

6. Structural Development of Livestock Farms in a Global Perspective  
   **Henning Otte Hansen** .............................................................................................................. 28-50

7. Whole Farm Problems with Heat Stress – It’s Not Just for Lactating Dairy Cows  
   **Allen Young** .............................................................................................................................. 51-57

## LEAD PAPER

1. Antimicrobial Peptides Expression for Defense System in Chicken Gastrointestinal and Reproductive Organs  
   **Yukinori Yoshimura, Bambang Ariyadi, and Naoki Isobe** ....................................................... 58-60

2. Improving Technology Adoption and Sustainability of Programs to Increase Bali Cattle Productivity in West Nusa Tenggara Province, Indonesia  
   **Yusuf A. Sutaryono, T. Panjaitan, and Dahlanuddin** .............................................................. 61-66

3. The Role of Family Poultry Systems in Tropical Countries  
   **Yusuf L. Henuk, Monchai Duangjinda, and Chris A. Bailey** ................................................... 67-71
SUPPORTING PAPERS

Part I

Animal Feed and Nutrition

1. NM-03-P The Marl and Kaolin in Broiler Diet: Effects on the Bone Weight and the Cutting Yield
   D. Ouachem, A. Meredef, and N. Kaboul...................................................72-75

2. NM-04-P The Effect of Liquid Nanocapsule Level on Broiler Fat Quality
   Andri Kusmayadi, Zuprizal, Supadmo, Nanung Danar Dono, Tri Yuwanta, Ari Kusuma Wati, Ronny Martien, Sundari......................................76-79

3. NM-05-O Production and Egg Quality of Quail Layer Given Diets Containing Different Levels of Crab (Portunus pelagicus) by-Product Meal
   K.G. Wiryawan, Syamsuhaidi, D.K. Purnamasari, and T.S. Binetta.................................................................80-84

4. NM-08-P A Preliminary Study on the Use of Enzyme and Organic Acids in Rice Bran-containing Diet at Two Levels of Dietary Protein for Rabbit
   Tuti Haryati and Yono C. Raharjo.................................................................85-89

5. NM-09-O Efficacy of Toxin Binder in Reducing Induced Aflatoxin B and Ochratoxin A in Broiler Feed
   Anjum Khalique, Muhammad Umer Zahid, Jibran Hussain, Zahid Rasool.................................................................90-93

6. NM-10-O Evaluation of Local Feed in Broiler Diets in Small Scale Farm in Palu Central Sulawesi

7. NM-11-O Digestibility and Nutritional Value of Gedi (Abelmoschus manihot (L.) Medik) Leaves Meal in the Diet of Broilers
   Jet Saartje Mandey, Hendrawan Soetanto, Osfar Sjofjan, Bernat Tulung.................................................................100-104

8. NM-12-O Utilization of Skipjack Tuna (Katsuwonus pelamis L.) Gill in Diet as a Source of Protein on Carcass Quality of Broiler Chickens
   Jein Rinny Leke, Jet S. Mandey, Meity Sompie, Fenny R. Wolayan.................................................................105-109

9. NM-13-O The Dynamics of Indigenous Probiotics Lactic Acid Bacteria on Growth Performance, Total Adherence Bacteria, and Short-Chain Fatty Acids Production in the Ileum of Male Quail
   Sri Harimurti, Sri Sudaryati and Bambang Ariyadi.................................110-110

</table>
28. NR-14-O  Restriction Feed and Refeeding Evaluation for Consumption, Feed Cost, Income Over Feed Cost, Percentage of Carcass and Meat Quality Kacang Goat
Bambang Suwignyo, Miftahush Shirothul Haq, Setiyono, and Edi Suryanto

29. NR-15-O  Characteristics of polyunsaturated fatty acids and nutrient digestibility feed cattle of the fermented rumen fluid by one and two stage in vitro
Riyanto, J., E. Baliarti, T. Hartatik, D.T. Widayati and L. M. Yusiatı

30. NR-16-P  Performance and Economic Efficiency of young Anglo-Nubian Goat Fed Different Protein and Energy
I-G.M.Budiarsana, Supriyati and L. Praharani

31. NR-17-P  Effect of Choline Chloride Supplementation on Productive Performance of Ettawa Crossbred Goats
Supriyati Kompiang, I Gusti Made Budiarsana, Rantan Krisnan, Lisa Praharani

32. NR-18-O  Body Weight Gain of Donggala Bull Given Supplement Feed on Basis of Cocoa Pod Husks Fermentation
F.F. Munier, Mardiana Dewi, and Soeharsono

33. NR-19-O  Influence of Cellulolytic Bacteria from Rumen Fluid on In Vitro Gas Production of Robusta Coffee Pulp (*Coffea canephora Sp.*) Fermented
Chusnul Hanim, Lies Mira Yusiatı, and Fahriza Anjaya Jazim

34. NR-20-P  Growth and Productivity of *Brachiaria brizantha* cv MG 5 under the effect of different dose of NPK fertilization
Nafiatul Umami, Meita Puspa Dewi, Bambang Suhartanto, Cuk Tri Noviandi, Nilo Suseno, Genki Ishigaki, Ryo Akashi

35. NR-21-O  *Indigofera Sp* as a Source of Protein in Forages for Kacang Goat in Lactation and Weaning Period
A. Nurhayu and Andi Baso Lompengeng Ishak

36. NR-22-O  Supplementing Energy and Protein at Different Degradability to Basal Diet on Total Protozoa and Microbial Biomass Protein Content of Ongole Grades Cattle
Dicky Pamungkas, R. Utomo, dan M. Winugroho

37. NR-24-O  Nutritive Evaluation of Pineapple Peel Fermented by Cellulolytic Microbe and Lactic AcidBacteria by In Vitro Gas Production Technique
Lies Mira Yusiatı, Chusnul Hanım and Caecilia Siska Setyawati
38. NR-25-O The Supplementation of ZnSO₄ and Zn-Cu Isoleusinate in the Local Feed Based at Last Gestation Period on Dry Matter Consumption and Digestibility and Calf Birth Weight of Bali Cattle
   FMS Telupere, E Hartati, and A. Saleh ........................................ 243-247

39. NR-26-P Local Micro Organisms (LOM) as an Activator to Enhance the Quality of Various Plant Waste as Feed
   Andi Ella, A. Nurhayu and A. B. Lompengeng Ishak .................. 248-251

40. NR-27-O Organic Acid and Inhibition of Complete Silage Ration on the Growth of Salmonella enteritidis
   Allaily, Nahrowi, M. Ridla, M. Aman Yaman ....................... 252-256

41. NR-28-O The utilization of some feed supplement by using or without molasses on local male sheep on fermentation results in rumen liquid, daily live weight gain, production, C/N ratio and water content of feces
   Suharyono, Teguh Wahyono, C. Ellen. K and Asih Kurniawati ............... 257-260

42. NR-29-O Evaluation of Albizia chinensis as Tannins Source for in Vitro Methane Production Inhibitor Agents Sheep Rumen Liquor

43. NR-30-O Growth and Productivity of Sorghum Bicolor (L.) Moench in Merapi Eruption Soil with Organic Fertilizer Addition
   Suwignyo, B, B. Suhartanto, G. Pawening, B.W.Pratomo ....... 266-270

44. NR-31-P Quality and Storability of Pelleted Cassava (Manihot utilisima) Leaves var. Bitter
   Ristianto Utomo, Subur Priyono Sasmito Budhi, Cuk Tri Noviandi,
   Ali Agus, and Fidrais Hanafi ........................................ 271-274

45. NR-32-O Biomass Production of Pueraria javanica Using Rhizobium Inoculant and Urine Bali Cattle in East Borneo
   Ida Ketut Mudhita, Nafiatul Umami, Subur Priyono Sasmito Budhi
   and Endang Baliarti .................................................. 275-280

46. NR-33-P The Effect of Using Different Sources of Carbohydrates to Feed Efficiency on Indigenous Thin Tailed Male Lamb
   Muktiani, A, A. Purnomoadi, E. Prayitno .......................... 281-285

47. NR-35-O Substitution of Concentrate by Protein Source Forage for Growing Heifer of Friesian Holstein (FH)
   Y. Widiawati and M. Winugroho ..................................... 286-290

48. NR-38-O The Use of Tricoderma sp. as a Starter of Fermentation Dry Teak Leaves (Tectona grandis) as Animal Feed
   Yunianta and Hartatik ............................................. 291-295

PART II

Animal Breeding and Reproduction

79. PPE-01-P Identification of Pure Breed Bali Cattle by Using Molecular Approach
Endang Tri Margawati, Indriawati, Slamet Diah Volkandari and Muhammad Ridwan...426-431

80. PPE-02-P Milk Transmitting Ability of Saanen Bucks under Intensive Management
Anneke Anggraeni.................................................................432-436

81. PPE-03-O Genetic Markers of Twinning Births of Local Beef Cattle and Its
Crossbreds in Indonesian
A. Anggraeni, S. A. Asmarasari, H. Hasinah, C. Talib and
B. Tiesnamurti........................................................................437-441

82. PPE-04-P Association of Prolactin Gene with Egg Production in PMp Ducks
T. Susanti and I. P. Sari...............................................................442-446

83. PPE-05-P Microsatellite analysis of genetic diversity in Pekin, Alabio, and their
crossbred duck populations
L. Hardi Prasetyo, T. Susanti, T. Purwadaria.............................447-447

84. PPE-08-P Genotypic Profile of Ettawa Grade Goat with Different Head and Neck
Color Based on MC1R Gene
Dyah Maharani, I Gede Suparta Budisatria, Panjono, Tety Hartatik
and Slamet Diah Volkandari....................................................448-451

85. PPE-09-O Polymorphism of Promoter Prolactine Gene and Its Association with Egg
Production of Selected Indonesian Kampung Chicken (KUB)
Tike Sartika..................................................................................452-452

86. PPE-10-O Qualitative And Quantitative Traits of Kokok Balenggek Chicken, the
Rare Indigenous Chicken in West Sumatera
Firda Arlina, Hafil Abbas, Sarbaini Anwar, Jamsari...............453-457

87. PPE-11-O Phenotype Measurements of Bali Cattle Combined with Interviews
of Farmers from Multiple Locations in Indonesia as a Resource for
Development of Breeding Programs
Ann Eriksson, Endang Tri Margawati, Indriawati, Ronny Rachman
Noor, Goran Andersson, Emma M Svensson.............................458-462

88. PPE-12-O Investigating the genetic status of Bali cattle in Indonesia using large scale
genotyping
Emma Svensson, Ann Eriksson, Ida Clemensson Lindell, Endang
Tri Margawati, Rere Indriawati, Ronny Rachman Noor and
Göran Andersson......................................................................463-463

xvi
89. PPE-14-P  Genetic Variation and Phylogenetic Tree of Indonesian domestic Goat  
Tety Hartatik, Kustantinah, Ristianto Utomo and Lies Mira Yusiati.................................464-469

90. PRP-01-O  Identification of GH|Alu-I Gene Polymorphisms in Indonesian Simeulue Buffalo  

91. PRP-02-O  Reproduction Performance of Bali Cow at Three Areas of Bali Province  
Andoyo Supriyantono........................................................................................................475-479

92. PRP-03-O  Blood Lipid Profile of Hypercholesterolemia Rattus norvegicus L. Fed with Sausages Containing Omega 3 and Omega 6 Fatty Acids  
Rio Olympias Sujarwanta, Edi Suryanto, Setiyono, Supadmo, Rusman, Jamhari, Yuny Erwanto.................................480-484

93. PRP-04-O  The Effect of Kayu Akway (Drymis sp) Extract on The Number of Leukocyte of The Male Mice (Mus musculus L)  
Purwaningsih, Angelina N. Tethool..................................................................................485-488

94. PRP-05-O  In Vitro Maturation Rate of Bligon Goat Oocytes Supplemented with Gonadotrophin  
Diah Tri Widayati and Mulyoto Pangestu..........................................................................489-493

95. PRP-06-P  A Preliminary Study of the Use of Hormones on the Reproductive Performance of some Breeds of Rabbits  
Bayu D. P. Soewandi and Yono C. Raharjo....................................................................494-497

96. PRP-08-P  The use of vaginal smear method based on the morphology of the vaginal mucosa epithelial cells for the dairy cows cycle estrus detection  
Riyanto, J., Sunarto, S. D. Widyawati and Lutojo.............................................................498-501

97. PRP-09-P  Optimization of Bovine Sperm Sexing: Modification of Column Length and Separation Time  
Riasari Gail Sianturi and D.A. Kusumaningrum...............................................................502-506

98. PRP-10-O  The Detailed Motility and Velocity Characteristics of Rams Spermatozoa as Assessed by Computer-Aided Semen Analysis.  
Ismaya.............................................................................................................................507-511

99. PRP-11-O  The Effect of Trehalose Level In Tris-based Medium On Sperm Membrane Integrity of Boer Goat Semen After Cooling  
Nurul Isnaini, Trinil Susilawati and Luqman Hakim.........................................................512-514

Evaluation of Albazia chinensis as Tannins Source for In Vitro Methane Production Inhibitor Agents Sheep Rumen Liquor

Anas, M. A., L. M. Yusiati, A. Kurniawati, C. Hanim
Faculty of Animal Science, Universitas Gadjah Mada, Yogyakarta, Indonesia
Corresponding email: muhsin_alanas@mail.ugm.ac.id

ABSTRACT: The objective of this study was to investigate the effect of Albazia chinensis as a source of tannin on in vitro methane production and rumen parameters. Two sheeps were used as donor of rumen microbes. Four experimental diets (grass:concentrat, 60:40) with addition of Albazia chinensis leaves equal to tannin level of 0%, 2%, 4% and 6% based on dry matter (DM) were used as substrate for in vitro fermentation by Menke and Steingass gas production method for 48 hours of incubation. Methane production, DM and organic matter (OM) digestibility, and parameters of rumen fermentation were measured at the end of incubation. Data obtained were analyzed by one way analysis of variance (ANOVA) continued by DMRT. The addition of Albazia chinensis leaves decreased (P<0.01) DM and OM digestibility with increasing of tannin level. Moreover, the treatment also decreased methane production. The significant decreasing occured at tannin level of 6%. The addition of tannin did not affect (P>0.05) number of protozoa, microbial proteins, ammonia, VFA and pH. It could be concluded that the addition of Albazia chinensis equal to tannin level of 6% is the optimal level to reduce methane production without any negative effects on rumen fermentation parameters.

Keywords: Methane, Tannin, Albazia chinensis, Sheep, In vitro

INTRODUCTION

Methane (CH$_4$) is gases which big potensi to cause of global warming (Reay et al., 2010). Methane emissions from the agriculture sector represents 40% of total anthropogenic methane production (Key and Tallard, 2012), with the largest (25%) contribution comes from ruminants enteric fermentation (Thorpe, 2009). Small ruminants (sheep and goats) produce CH$_4$ emissions by 475 million tonnes of CO$_2$eq. Estimates of global CH$_4$ emissions by ruminants ranged between 65 to 85 million tonnes per year, while the total CH$_4$ emissions globally from 400 to 600 million tonnes per year (FAO, 2013). Methane emissions not only related to environmental issues, but also represents a loss of gross energy of feeds which can not be used for the production process. Approximately 2 to 12% of feed gross energy consumed by ruminant lost as CH$_4$ (Patra, 2012).

Several research using in vitro and in vivo method to mitigation of CH$_4$ production and improvement of ruminant performance have been done by supplementation of concentrate (Lovett et al., 2005), fumarate (Ungerfeld et al., 2007), sinamaldehid (Macheboeuf et al., 2008), antraquinone (Yusiati et al., 2010), and essential oils (ME) (Calsamiglia et al., 2007). Tannins or polyphenols is plant natural compound which could be use to reduce CH$_4$ emissions from rumen fermentation. Reduction methane supplementation of several legumes as tannin sources reduce CH$_4$ production from in vitro rumen fermentation are reported by Puchala et al., (2005)
The 6th International Seminar on Tropical Animal Production
Integrated Approach in Developing Sustainable Tropical Animal Production
October 20-22, 2015, Yogyakarta, Indonesia

The mechanisms of tannins inhibition on CH$_4$ production are directly by inhibits the growth and activity of methanogens. (Tavendale et al., 2005) and indirectly by form complex tannins protein binding which limiting methanogens acces to protein (McSweeney et al., 2001). And also reducing fiber digestion that reduces the production of hydrogen (H$_2$) a precursor of CH$_4$ synthesis. Albazia chinensis is legume which has high polyphenol compound. Tannins content in Albazia chinensis is 7.21% DM based on Laboratory analysis. This study was conducted to determine the effect of Albazia chinensis as a source of tannins on CH$_4$ production of sheep in vitro.

MATERIALS AND METHODS

Albazia chinensis Preparation

Albazia chinensis was gain from Wonogiri, Central Java, Indonesia dried in an oven at temperature of 55°C for 3 days, then grounded using a Wiley mile and seave in size of 1 mm. Chemical composition of samples were analyzed using proximate analysis method (AOAC, 2005) and tannins content analyzed according Makkar (2003).

Inoculum preparation

Rumen fluid was obtained from two head of slaughtered sheeps before morning feeding. The sheeps had been adapted to diet consist of forages and concentrates in ratio 60:40 DM basic which offered in equal proportions twice a day.

In vitro gas production

In vitro gas production were used in this research according Menke and Steinngas, (1988). Substrate for fermentation consist of Pennisetum purpureum Schum (60%) and concentrates (40%) DM based. Albazia chinensis leaf were added to the fermentation diet equal to tannin content of 0, 2, 4, and 6% DM feed. Fermentation was conducted for 48 h. At the end of incubation gas samples were collected for methane determination using gas chromatography. Residual feed were collected to calculate DM and OM digestibility, wherease pH, microbial protein synthesis, ammonia, and VFA were measured from the liquid media. Protein of microbe were determined using Lowry methode (Plummer, 1987), protozoa according to methode of Diaz et al., (1993), ammonia followed Chaney and Marbach, (1962), and VFA acording to Filipek and Dvorak, (2009).

Statistic Analysis

Data obtained were analyzed by one way analysis of variance (ANOVA) continued by Duncan’s new multiple range test (DMRT).

RESULTS AND DISCUSSION

Addition of Albazia chinensis at tannin levels of 0, 2, 4, and 6% DM feed have no effect on pH, protozoa, microbial protein, and NH$_3$. pH media range from 6.92 to 6.97. Normal pH for microbial activity range between 5.5 to 7.6 and optimal at 6.7 to 7.0 (Owens and Zinn, 1988) This result is in accordance to Chaudhary et al., (2011).that reported giving tannins from Ficus infectoria leaves in ruminant did not influence significantly on the pH value. For protozoa number, Aghamohamadi et al., (2014) reported that tannin from Quercus persica have no effect on protozoa population in rumen fermentation of sheep. Microbial protein were reported did not affected by tannin extract (Wischer et al., 2012). Utilization of Quercus libani Oliv. in the diet equal to tannin content 16.57 to 22.43 mg/100 ml did not showed the influence on the NH$_3$ content (Abarghuei, 2011). The concentration of NH$_3$ in the rumen depends on feed protein content. The higher the protein content of the feed the higher the concentration of NH$_3$ (McDonald, 2002).

a,b,c different superscripts at the row showed significant differences.

Albazia chinensis as a source of tannin decreased (P <0.01) digestibility of DM and OM. Digestibility of DM and OM with the addition of 2% tannin level significantly lower than the level 4 and 6%. Tannins from various sources able to reduce DM and OM on feed fermentation in the rumen (Attia <i>et al.</i>, 2013). Digestibility of DM and OM associated with protein digestibility and other organic materials such as carbohydrates and fats (Kurniawati <i>et al.</i>, 2013). Tannin in moderate level could be used to protec feed protein from microbial rumen degradability.

The results showed that the addition Albazia chinensis as a source of tannin did not affect significantly (P> 0.05) the production of total VFA and VFA components (acetate, propionate, and butyrate). Same result was reported by Dentinho <i>et al.</i>, (2014) that feeding containing tannins, both in high and low levels did not affect the VFA production or component. Different tannin source contain different nutrients, particularly carbohydrates content such as cellulose and hemicellulose which will affect the total production of VFA. The proportion of VFA in rumen fluid varies depending on the kind of feed consumed (McDonald <i>et al.</i>, 2002).

Albazia chinensis as tannin source at level 0, 2, 4 and 6% did not affect significantly on total volume CH<sub>4</sub> production. But CH<sub>4</sub> production based on DM and OM digestibility were reduced significantly by addition of Albazia chinensis at tannin level of 6%. CH<sub>4</sub> production decreased as much as 12.11%/DM digestibility and 16.24%/OM digestibility compared to control. Declining of CH<sub>4</sub> production in ruminants by tannins also reported by Aghamohamadi <i>et al.</i>, (2014). Tannins affinities to bind to protein and other nutrient are varies depend on tannins sources. Sasongko, (2010) stated that the tannins have optimal holding capacity to bovine serum albumin at a certain concentration. Utilization of jackfruit leaves as a source of tannins with varying concentrations have different affinity on binding to protein. At certain tannin concentrations the binding affinity will decreased due to saturation point.
CONCLUSIONS

In conclusion, the addition of Albazia chinensis leaves at a tannin level of 6%, reduces CH$_4$ production with no negative effect on rumen fermentation. The decreasing of DM and OM digestibility due to reduction of protein digestibility.
