PREFACE

On behalf of Faculty of Animal Science, Universitas Gadjah Mada, I am pleased to present you the 6th International Seminar on Tropical Animal Production (ISTAP) which is held on October 20–22, 2015 at Auditorium drh. Soepardjo, Faculty of Animal Science UGM, Yogyakarta. Under the main theme “Integrated Approach in Developing Sustainable Tropical Animal Production”, we expect that information and ideas on animal production systems in the tropics and its related problems will be shared among participants, thus we can elaborate an integrated approach in developing sustainable tropical animal production. I believe, this can be achieved since more than 250 animal scientists, researchers, students, and producers from more than 15 countries join this seminar.

In this moment, I have to address my great thanks to all people who have contributed for the success of this seminar. First, to all participants, thank you for your contributions, time, and efforts in participating in all sessions in this seminar. We also would like to extend our gratitude to the reviewers and editors for dedicate their expertise and precious time in reviewing and editing the papers. I deeply appreciate the hard work of all members of the Steering Committee, Organizing Committee, and students of Faculty of Animal Science UGM for making this seminar achieved a great success!

I hope all of you enjoy the seminar and Jogja as well!

Dr. Cuk Tri Noviandi

Editor in Chief
REPORT FROM ORGANIZING COMMITTEE

Dear all of the scientists, delegates, participants, ladies and gentlemen,

Praise be to The Almighty for His Merciful and Beneficent to raise up this memorable moment for all of the scientists and delegates from all over the world who were interested in Animal Science field to meet up together.

On behalf of all the members of Board Committee, it is my great pleasure and honor to welcome all of you and impress thankful, and present a high appreciation for your participation in joining the 6th ISTAP in Yogyakarta, one of the Special Region in Indonesia where culture and tradition live in harmony with the modern nuance and educational spirit makes it a beautiful venue of this seminar.

During this event, we have distinguished scientists from all over the world to present plenary papers Livestock Management, Production, and Environment; Feed, Land, and Landscape for Sustainable Animal Production; Livestock Industry and Technology; Economics, Social, and Culture in Livestock Development; and Special issue on Halal Food, Safety and Regulation. It is noted that around 200 scientists as well as livestock producers, companies, graduate and postgraduate students from 15 countries attend the seminar; and more than 160 research papers will be presented. We can see great enthusiasm of all the scientists to solve livestock problems as well as to share valuable information and knowledge for human prosperity all over the world.

The 6th ISTAP Program consists of scientific and technical programs as well as social and cultural activities. The scientific and technical programs offer 4 plenary sessions, field trip, and many scientific sessions (both oral and poster presentation). The social and cultural programs of the 6th ISTAP are very important as the scientific and technical programs since the promotion of friendship and future scientific cooperation are also central to this seminar. Opening Ceremony offers you the Seminar Program a glance. Participants will attend a warm invitation from Dean Faculty of Animal Science UGM in a Welcome Dinner that will give you the most memorable moment to attend. Field trip activity offers a wonderful sightseeing to the most spectacular natural landmark in Yogyakarta, Merapi Lava Tour and Ulen Sentalu Museum. We do hope that you will not miss any of these wonderful opportunities.

Closing Ceremony will be held on October 22nd, 2015, immediately after the last session of presentation. The 6th ISTAP award will be announced for some participant as an appreciation for their valuable research.

Finally, on behalf of 6th ISTAP Committee, I wish all of the participants having a great achievement of success and fulfill the expectation as well as enjoying the interaction with all scientists participating in the seminar.

High appreciation I may acknowledge to the Rector of Universitas Gadjah Mada and Dean Faculty of Animal Science UGM, who have concerned to facilitate the seminar site host.

Special thank to the Steering Committee, Scientific Committee, Reviewers and Editorial Boards for their great contribution to make the seminar successfully organized.

Terima kasih (Thank you).
Sincerely Yours,

Prof. I Gede Suparta Budisatria, Ph.D
Chairman
The Organizing Committee of the 6th ISTAP
WELCOME ADDRESS

Selamat pagi (Good morning)

Dear Rector of Universitas Gadjah Mada, all of Invited Speakers, honorable guests, all of delegates, participants, distinguished guests, Ladies and Gentlemen

Attendants of The 6th ISTAP,

It is my great pleasure and honor to extend a warm welcome to all of you at The 6th International Seminar on Tropical Animal Production, which be held on October 20 – 22, 2015 at Auditorium drh. Soepardjo, Universitas Gadjah Mada, Yogyakarta Indonesia. This seminar is proudly organized by Faculty of Animal Science Universitas Gadjah Mada.

The contribution of this seminar to the development of national food security is truly significant for introducing of new scientific knowledge and equipments that is much needed in Indonesia to maintain a safe and secure environment and to look at more effective ways to meet future challenges. We can see great enthusiasm of the entire participant to present their latest research as well as to share valuable information and knowledge for human prosperity all over the world.

In these 3 days of seminar, we have invited some Plenary Speakers and Invited Papers who are qualified as scientists and bureaucrats in animal science field to share their valuable information and knowledge. Other participants can deliver their precious research through oral and poster presentations.

Finally, on behalf of Faculty of Animal Science, we would like to extend our sincere gratitude to the Minister of Rural, Rural Development, and Transmigration, Republic of Indonesia, Mr. Marwan Jafar, for his generosity to be with us here to give Keynote Speech. Then, it is our great honor and pleasure to have qualified scientists and bureaucrats as Plenary Speakers and Invited Papers to share their valuable knowledge during the plenary and concurrent sessions. Moreover, special thank you is for the Steering Committee, Scientific Committee, Reviewers and Editorial Boards for their great contribution to make the seminar a great success. Also, we would like to congratulate and deliver high appreciation to the Organizing Committee as the organizer for their great contribution and generous efforts to make the seminar successfully organized.

And to all of the participants, I hope that this seminar will always success and bring some acknowledgement for all of us. Also, I wish all of the participants having a great achievement of success and fulfill the expectation as well as enjoying the interaction with all participants.

With all of our hospitality, we will try our best to make your brief visit to our country become a wonderful and memorable moments. We are looking forward to meeting you all in the future event.

Wish you all a very pleasant and most enjoyable stay in Yogyakarta, Indonesia, beside you scientific journeys.

Terima kasih (Thank you).

Sincerely Yours,
Prof. Dr. Ali Agus
Dean Faculty of Animal Science UGM
OPENING REMARKS

Dear all of Scientists, distinguished guests, delegates, participants, Ladies and Gentlemen,

On behalf of Universitas Gadjah Mada, I am happy to welcome you and present a high appreciation for your participation in joining the 6th International Seminar on Tropical Animal Production hosted by the Faculty of Animal Science UGM in Yogyakarta from 20 – 22 October 2015.

Under the theme of “Integrated Approaches in Developing Sustainable Tropical Animal Production”, we do hope that this seminar concludes with shared ideas and best practices, technology, and global networks that are required to increase animal production. The increase of animal production as one source of food is crucial to feed the world given that the population is expected to increase from 6 billion to about 8.3 billion in 2030. According to FAO (2008, 2009), the consumption of animal food increased from 10 kg/per annum in 1960, 26 kg/per annum in 2000, and it is expected to be 37 kg/per annum. Animal production is an integral part of food production and contributing for the quality of human food supply. Animal and agricultural production is an important component in the integrated farming systems in developing countries as this produces high quality foods, provides job opportunities in rural areas, as well as enriching livelihood.

As a tropical country with high animal biodiversity, Indonesia and other tropical countries, have a variety number of indigenous and local animal genetic resources and germ plasm. This variety of animal germ plasm could be explored and developed not only for animal and food production but also for animal conservation. Apart from being exploited as food resources, it is therefore important to consider animal conservation. Conservation will protect the genetic potency of local bred and their family, and the domesticated animal bred, and this would secure our future food resources.

In these 3 days of seminar, we believe those aforementioned issues will be discussed, and technical solution as well as recommendation will be provided to solve the existing problems in tropical animal production.

Finally, on behalf of Universitas Gadjah Mada, we would like to congratulate and thanks to the Faculty of Animal Science UGM as the organizer for their great efforts to make the seminar successfully organized. To all of participants, I wish all of you have a great discussion and interaction with other scientists participating in the seminar as well as enjoying your time in Yogyakarta.

Thank you

Prof. Ir. Dwikorita Karnawati, M.Sc., Ph.D.
Rector of Universitas Gadjah Mada
## LIST OF CONTENTS

**PREFACE** ................................................................................................................................. iii
**REPORT FROM ORGANIZING COMMITTEE** ........................................................................ iv
**WELCOME ADDRESS** .............................................................................................................. v
**OPENING REMARKS** ............................................................................................................... vi
**LIST OF CONTENTS** ................................................................................................................. vii

### PLENARY SESSION

1. Strategies to Increase the Domestic Production of Raw Milk in Indonesia and Other South East Asian Countries  
   **John Moran and Phillip Morey** ......................................................................................... 1-11

2. Nutritional Challenges of Lactating Dairy Cattle in a Tropical Climate  
   **J. K. Bernard** ................................................................................................................... 12-17

3. Feed, Land, and Landscape for Sustainable Animal Production  
   **Shaukat A. Abdulrazak and Isaac M. Osugab** ................................................................ 18-18

4. Food Safety Regulation and Halal Food Issues in Indonesia  
   **Roy Sparringa** .................................................................................................................. 19-19

5. Extension System for Livestock Development in Developing Countries: Knowledge Management Application  
   **Budi Guntoro** .................................................................................................................. 20-27

6. Structural Development of Livestock Farms in a Global Perspective  
   **Henning Otte Hansen** ...................................................................................................... 28-50

7. Whole Farm Problems with Heat Stress – It’s Not Just for Lactating Dairy Cows  
   **Allen Young** ................................................................................................................... 51-57

### LEAD PAPER

1. Antimicrobial Peptides Expression for Defense System in Chicken Gastrointestinal and Reproductive Organs  
   **Yukinori Yoshimura, Bambang Ariyadi, and Naoki Isobe** .............................................. 58-60

2. Improving Technology Adoption and Sustainability of Programs to Increase Bali Cattle Productivity in West Nusa Tenggara Province, Indonesia  
   **Yusuf A. Sutaryono, T. Panjaitan, and Dahlanuddin** .................................................... 61-66

3. The Role of Family Poultry Systems in Tropical Countries  
   **Yusuf L. Henuk, Monchai Duangjiinda, and Chris A. Bailey** ........................................... 67-71
SUPPORTING PAPERS

Part I

Animal Feed and Nutrition

1. NM-03-P The Marl and Kaolin in Broiler Diet: Effects on the Bone Weight and the Cutting Yield
   D. Ouachem, A. Meredef, and N. Kaboul..................................................72-75

2. NM-04-P The Effect of Liquid Nanocapsule Level on Broiler Fat Quality
   Andri Kusmayadi, Zu prizal, Supadmo, Nannung Danar Dono, Tri Yuwanta, Ari Kusuma Wati, Ronny Martien, Sundari.................76-79

3. NM-05-O Production and Egg Quality of Quail Layer Given Diets Containing Different Levels of Crab (Portunus pelagicus) by-Product Meal
   K.G. Wiryawan, Syamsuhaidi, D.K. Purnamasari, and T.S. Binetra.................................................................80-84

4. NM-08-P A Preliminary Study on the Use of Enzyme and Organic Acids in Rice Bran-containing Diet at Two Levels of Dietary Protein for Rabbit
   Tuti Haryati and Yono C. Raharjo..............................................................85-89

5. NM-09-O Efficacy of Toxin Binder in Reducing Induced Aflatoxin B and Ochratoxin A in Broiler Feed
   Anjum Khalique, Muhammad Umer Zahid, Jibran Hussain, Zahid Rasool.............................................................90-93

6. NM-10-O Evaluation of Local Feed in Broiler Diets in Small Scale Farm in Palu Central Sulawesi

7. NM-11-O Digestibility and Nutritional Value of Gedi (Abelmoschus manihot (L.) Medik) Leaves Meal in the Diet of Broilers
   Jet Saartje Mandey, Hendrawan Soetanto, Osfar Sjofjan, Bernat Tulung..........................................................100-104

8. NM-12-O Utilization of Skipjack Tuna (Katsuwonus pelamis L.) Gill in Diet as a Source of Protein on Carcass Quality of Broiler Chickens
   Jein Rinny Leke, Jet S. Mandey, Meity Sompie, Fenny R. Wolayan.................................................................105-109

9. NM-13-O The Dynamics of Indigenous Probiotics Lactic Acid Bacteria on Growth Performance, Total Adherence Bacteria, and Short-Chain Fatty Acids Production in the Ileum of Male Quail
   Sri Harimurti, Sri Sudaryati and Bambang Ariyadi........................................110-110
10. NM-14-O  Selection of Human-origin Lactobacillus Strains as Probiotics with Capability in Synthesizing Conjugated Linoleic Acid and Alleviating Hyperglycemia in Rats (Rattus norvegicus) in Vivo Widodo, Pradipta Ayu Harsita, Samuel Aditya, Nosa Septiana Anindita, Tutik Dwi Wahyuningsih and Arief Nurrochmad...........................................111-116

12. NM-16-O  Performance of Japanese Quails Fed Different Protein Levels and Supplemented with Betaine Adi Ratryianto, Rysca Indreswari, Adi Magna Patriadi Nuhriawangsa, Apriliana Endah Haryanti...........................................118-122

13. NM-17-O  The Influence of Vitamin D3 Levels on Diets with Phytase on Production Performance of Layer Quail (Coturnix coturnix japonica) Adi Magna Patriadi Nuhriawangsa, Adi Ratryianto, Winny Swastike, Rysca Indreswari, Ahmad Pramono and Try Haryanto...........................................123-126

14. NM-20-O  Phytobiotics Habbatus Sauda and Garlic Meal: Are Still Efficacious During the Spread of Marek’s Disease Outbreak? N.D. Dono, E. Indarto, Kustantinah, Zuprizal...........................................127-131

15. NM-22-O  The Effect of Dietary Calcium and Phosphorous Level on Serum Mineral Contents of the Bantul Local Duck within a Day H. Sasonoko, T. Yuwanta, Zuprizal, Supadmo, and I. Widiyono...........................................132-132

16. NR-01-P  Supplementation Local Feed Urea Gula Air Multinutrient Block and Different Levels of Sulphur for Increase Lactation Productivity Doe Also Decrease Kid Mortality Bligon Goat Grazed at Timor Savannah Arnold E. Manu, Yusuf L. Henuk, H.L.L. Belli, M.M. Kleden...........................................133-137

17. NR-02-P  Methane Production and Rumen Fermentation Characteristics of Buffalo Ration Containing Sorghum Silage with Rumen Simulation Technique (RUSITEC) Methods Teguh Wahyono, Dewi Apri Astuti, Komang G. Wiryawan, Irawan Sugoro, Suharyono...........................................138-142

18. NR-04-O  Body Weight Gain Response of Sumba Ongole Cattle to the Improvement of Feed Quality in East Sumba District, East Nusa Tenggara, Indonesia Debora Kana Hau and Jacob Nulik...........................................143-146
19. NR-05-O  Daily Body Weight Gain of Bali Cattle Fed with Leucaena Leucocephala as the Main Ration in West Timor, East Nusa Tenggara, Indonesia
   Jacob Nulik and Debora Kana Hau...............................................................147-150

20. NR-06-O  Tannin Anthelmintic Doses, Metabolizable Energy and Undegraded Protein Contents of Rubber Leaves (Hevea brasiliensis) as Herbal Nutrition for Goats
   Sri Wigati, Maksudi Maksudi, Abdul Latief and Eko Wiyanto ................................151-155

21. NR-07-P  Consumption and Digestibility of Nutrients in Bali Cattle at the Last Period of Pregnancy Kept under Semi Intensive System Supplemented with Nutritive Rich Feed Contained Lemuru Oil and Zinc
   Erna Hartati, E.D. Sulistijo, A. Saleh.................................................................156-160

22. NR-08-P  Preliminary Screening for Anthelmintic Potential of Sesbania grandiflora Leaves for Parasitic Infected Goats in Short-Term Trial
   Mohd Azrul Lokman, Kanokporn Phetdee, Sathaporn Jittapalapong and Somkiert Prasanthi.................................................................161-165

23. NR-09-O  The Effect of Urea Treated Straws and Urea-Molasses Feed Blocks (UMB) on Reproductive Performance of Libyan Barbary Sheep
   Mabruk, H.S., H. A. Salim, A. E. Benshaban, A.E. Ahtash, H.E. Daeky and Z.N. Elmeshabie.................................................................166-172

25. NR-11-O  Chemical Composition, Antioxidant Compounds and Antioxidant Capacity of Ensiled Coffee Pulp

26. NR-12-O  Influence of Starch Type as Substrate Material in Dry Lactic Acid Bacteria Inoculant Preparation on Fermentation Quality and Nutrient Digestibility of King Grass Silage
   B. Santoso, B. Tj. Hariadi and Jeni.................................................................182-186

27. NR-13-O  Responses of Growing-Female Crossbred Ettawa Goats Fed Concentrates Containing by product of Traditional Fried Snack Industry with Different Levels of Urea
   A R. Asih, K G. Wiryawan, I. N. Sadia, and Kertanegara..................................187-190

Exploration of Potential Regional Resources for Beef Cattle Farming Development in Java, Indonesia

Rini Widiati¹, Tri Anggraeni Kusumastuti¹, Mujtahidah Anggriani Ummul Muzaynah¹

ABSTRACT: National beef production in Indonesia from year to year has been always low compared with the consumer demand, thus it still depend on imports. The purposes of this study were: (1) to identify factors related to the regional resources which support the development of cattle farming, (2) to determine the potential resources for the development of beef cattle farming, and (3) to improve beef cattle development strategy based on the potential resources. The location taken were two provinces in Java, namely East Java Province and Special Region of Yogyakarta. Time series data from 2007 to 2012 as variables in this study were taken as each 7 and 4 regency as the samples. These data were analyzed by Multiple Regression Model using Ordinary Least Square method. The stationary test was done before using time series data by unit root tests of Augmented Dickey-Fuller (ADF). Dependent variable in the model was beef cattle population in each regency per year. Meanwhile the independent variables were population, number of farmers, price of cattle, number of cattle slaughtered, number of cattle that exit from region, number of cattle that enter to region, rice production, corn production, soybean production, cassava production in each region per year and dummy location. The results of this research showed that enhancement of corn and soybean production in a region was potential resource to increase the population of beef cattle. Moreover, the beef cattle price per kg of live weight and number of beef cattle slaughtered in a region need to be considered as the factors for strategies in developing beef cattle farming. Location has significant effect on the beef cattle development.

Keywords: Development, beef cattle farming, regional resources, Java

INTRODUCTION

Indonesia is an agricultural country because 85% of the population had livelihood as farmers, with an average ownership of arable land below 0.5 ha especially in Java. Farmers generally have a livestock including beef cattle with small scale 1-3 Animal Unit (AU), as an activity that was complementary and supplementary to the crops farming with the aim to increase their farm income. According to Stur, et al., (2013) livestock production in developing countries can be an important pathway for rural communities to get out of poverty. Based on data from the Ministry of Agriculture of the Republic of Indonesia (Suswono, 2012; Directorate General of Livestock and Animal Health, 2008 and 2013), the national consumption of beef for Indonesian society had been continuing to increase from 2007 to 2012 that is 396.00 to be 508.90 thousand tons or an average of 5.26% per year. In the same period, national production has only increased of 4.61% per year while imports of beef by an average of 36.98% per year. Therefore, the development of beef cattle was good employment opportunities for farmers in the rural. The opportunity was supported by the nature of Indonesia that were geographically and demographically has a wealth of natural resources that were believed to have comparative and competitive advantages for beef cattle business (Rauf, et al., 2014). However, there were still various kinds of constraints in development of beef cattle farming such as capital, technology and human resource capabilities (Rauf, et al., 2014; Priyanto, 2011; Widiati, 2006). The main reason of the various constraints were the dynamics of agriculture resources such as soil types, climate conditions, rainfall, social and cultural conditions of the population and others. The dynamics of the use of resources that could improve crop yields will
have impact on the increase the supply of animal feed as an important resource for the livestock development (Teklewald, et al. 2013).

This study tried to seek an alternative to improve smallholder beef cattle based on the potential resources of the region to support the existing government programs. Accumulation of regional resources can provide greater inputs for production than the individual approach farmers with limited land, capital and labor. It was needed to support previous research which suggests that one strategy to develop of the beef cattle farming industry in Indonesia was encouraging of investors to develop forage industry as feed suppliers which has processed with touch of technology to make it easier for farmers to access in large quantities and low prices (Widiati, 2014). Administratively, a region can be village, sub-district, district or regency, and city which have extensive agricultural land resources and population as labor forces as well as consumer for goods and services. Furthermore, population was also the owner of capital on the region. County-level yield data can be used in applied crop insurance policy in place of farm level (Gerlt, S. et al. 2014).

A production process of agricultural including beef cattle farming in a region can be described in the following function (Penson, et al., 2002):

\[ Y = f(A, L, I, M) \]

Where: \( Y \) = output or product, \( f \) is a function of \( A = \) area/ and for various activities of farming, \( L = \) labor, \( I = \) investment/capital and \( M = \) management or technology.

Agricultural resources such as crops and beef cattle are interrelated, dependent, and supporting to each other. Therefore, the availability of resources in a region is very important to be studied in an effort to increase the population and production of beef cattle.

**MATERIALS AND METHODS**

The Province of East Java and Special Region of Yogyakarta (DIY) which were as regional suppliers of beef cattle represented as sample location. Furthermore was taken 7 regencies of the 29 regencies in East Java and four regencies or of all in DIY. This study were using time series data collected for 2007-2012 (6 years) for every sample regions that was available completely from relevant institutions related to the research, that were the Central Bureau of Statistics, Abattoirs office, Department of Animal Husbandry, and the Department of Agriculture in each regency. The existence of beef cattle development in an area can be measured from the increase in beef population from year to year as dependent variable that was included on the multiple linear regression model as shown equation 2.

\[
\text{BCP}_{it} = \beta_0 + \beta_1 \text{Pop}_{it} + \beta_2 \text{NF}_{it} + \beta_3 \text{PC}_{it} + \beta_4 \text{CS}_{it} + \beta_5 \text{CE}_{it} + \beta_6 \text{RProd}_{it} + \beta_7 \text{CrProd}_{it} + \\
\beta_8 \text{SProd}_{it} + \beta_9 \text{CsProd}_{it} + \alpha \text{ID}_{it} + e_t
\]  

The notations were:

- \( \text{BCP}_{it} \) = beef cattle population as the dependent variable in the region \( i \) in year \( t \) (head);
- \( \beta_0 \) = intercept;
- \( \beta_1, \beta_2, \beta_3 \ldots \beta_{10} \) = regression coefficient of independent variable of \( X_{1i}, X_{2i}, X_{3i} \ldots X_{10i} \);
- \( \text{Pop}_{it} \) = population in region \( i \), in the year of \( t \) (person);
- \( \text{NF}_{it} \) = the number of farmers in region \( i \), and year \( t \) (person);
- \( \text{PC}_{it} \) = price of cattle in region \( i \), and year \( t \) (IDR/kg live weight);
- \( \text{CS}_{it} \) = the number of cattle slaughtered in region \( i \), and year \( t \) (head/yr);
- \( \text{CE}_{it} \) = the number of cattle that exit from region \( i \), and year \( t \) (head/yr);
- \( \text{RProd}_{it} \) = rice production in region \( i \), and year \( t \) (ton/yr);
- \( \text{CrProd}_{it} \) = corn production in region \( i \), and year \( t \) (ton/yr);
- \( \text{SProd}_{it} \) = soybean production in region \( i \), and year \( t \) (ton/yr);
- \( \text{CsProd}_{it} \) = cassava production in region \( i \), and year \( t \) (ton/yr);

October 20-22, 2015, Yogyakarta, Indonesia

\[ \alpha_t D_t = \text{dummy of location, } 1 = \text{in region i for East Java province, in year } t; \]
\[ 0 = \text{in region i for Special Region of Yogyakarta in year } t; \]
\[ e_t = \text{error term, } i = 1, 2, \ldots, 11; \text{region to } 1, 2, 3, \ldots, 11 \]
\[ t = 1, 2, \ldots, 6; \text{year to } 2007, 2008, 2009, 2010, 2011, 2012 \]

Estimation and validation of the model started from the correction of the time series data by using tests such as stationer, co-integration, and residual tests. The stationer tests considered herein are unit root tests of Augmented Dickey-Fuller (ADF). The occurrence of co-integration, if there was a long-term relationship between independent and dependent variables using Johansen Co-integration test through the trace statistics. The existence of independent variables that are mutually co-integrated needed to be corrected with Error Correction Model / ECM (Greene, 2003; Gujarati, 2003). Furthermore, the coefficient of Regression estimated by using Ordinary Least Square method (OLS). The stationary test of time series data was used to make the variance became constant according to OLS assumptions, because there was a possibility of lag intercorrelation that might affect inconsistency of variance. The accuracy of the model was tested using a hypothesis test consists of a coefficient of determination (R^2), Overall test (F test) and partial test (t test). All of the above tests was done with the help of a computer using Eviews 6th.

RESULTS AND DISCUSSION

Beef cattle farming and its supporting resources in Java, Indonesia

Java island including the large islands in Indonesia which was inhabited by 138.794 million people (44.74%) and having plains area of 192,257,000 ha (7.23%) (Central Bureau of Statistics, 2013). While, East Java province has the largest population of beef cattle, which was in 2012 reached 5,019,445 heads, with population of 37.56 million people and 1,913,213 ha of agricultural land, followed by DIY which has beef cattle population of 414,381 heads, with a population of 3.71 million people and 132,987 ha of agricultural land. East Java Province and DIY had a dense population, but population of beef cattle can still above the national average of Indonesia. Beef cattle breeding that produce bulls as a supplier of beef was usually cultivated by farm households. Generally, farmers in Java grow crops to meet the needs of staple food such as rice, corn, soybeans, peanuts, cassava and be accompanied its byproducts that used as animal feed. While outside of Java are still many forests and plantations, especially oil palm has a byproduct as a source of quality livestock feed. Nevertheless, generally the type of crop orientation is largely determined by the existing agro-ecologies in a region (Silvia and Matus, 2014).

The population of cattle and beef production in each region has fluctuated (Table 1). In 2011 there was a striking increase in livestock population, because in that year there are government assistance programs that distribute cows to farmers. However, to make a beef cattle development strategy requires the supporting factors as a basic for further policy.

Table 1. The population of cattle and beef production in east Java, DIY and Indonesia
Factors that influence to the development of beef cattle population

Based on the results of the unit root test, at the level of stationary there are three independent variables are stationary, namely the CEx, CEn and CsProd (ADF Prob <0.05). The data that are not stationary in order to become stationary, then it differentiated at the first difference level in the unit root analysis showed that all of independent variables have been stationary (ADF Prob <0.01). The data that are not stationary before the first difference level, there are possibility of co-integration which are the long-term relationships between independent and dependent variables. Therefore it was necessary to the co-integration testing considered herein using Johansen Co-integration test. The result of Johansen Co-integration test, there are three variables that are not mutually co-integrated, namely BCP with independent variables of CS, CsProd and SProd in which the value of Trace statistic was less than the critical value at 5% confidence level (P <0.05). Other independent variables were co-integrated with each other therefore in the short term there may be disequilibrium so that necessary to correction, in this research using the error correction model (ECM). Based on the ECM analysis showed that all independent variables have a residual value of significance level P <0.01 so that the ECM model were valid and the data can be used for further analysis. Ouedraogo and Bako (2014) have also conducted models of analysis of time series data using these methods. The regression analysis of the data that had been corrected was shown in Table 2.

Table 2. Results of regression analysis of the factors that influence to the development of beef cattle population.

Source: Results of data analysis

From Table 2 it could be observed that the adjusted $R^2 = 0.8556$ by F test ($P<0.001$), it meant that the independent variables together could explain 85.56% to the development of beef cattle population, while the rest were described other factors that was not included in this model. Partially, the price of beef (PB), corn production (CrProd), soybean production (SProd) had positive influence to the development of beef cattle population with significant level of $P<0.01$, and the dummy of location (D) with $P<0.05$, meanwhile, slaughtering of cattle (SC) in an area had negative effect of $P<0.1$. Beef prices (BP) based on live weight gave a positive response to the increase in population, thus the cattle pricing policy that was greater than the cost of production should be considered in an effort to increase of production and population of beef cattle in Indonesia. Corn and soybean production had a significant positive effect on the development of beef cattle in the region. The rice production had not significant effect, although the rice plant produced straw as potential feed for beef cattle. This is because the rice productions were generally need to be managed intensively which labor intensive, thus there was no more time left to raise the cattle. Corn and soybean production had a significant positive effect on the development of beef cattle in the region. The rice production had not significant effect, although the rice plant produced straw as potential feed for beef cattle. This is because the rice productions were generally need to be managed intensively which labor intensive, thus there was no more time left to raise the cattle. Production of rice straw in Indonesia is only about 33% for animal feed, 50% were burned and 17% for the industry (Shaphan 2008 in Herawati, 2013). The production of corn, soybeans and rice would be followed by a byproduct in the form of straw as cattle feed. The protein content in soybean straw was the highest (16.6%), followed by the content in corn straw (7.7%) and rice straw (4.10%). Moreover among these 3, corn straw was the most preferred by beef cattle (Emma, 2011; Hartadi et al. 2005). The number of cattle slaughtered had negative significant effect on the cattle population in an area ($P<0.1$). Therefore, to develop the beef cattle population in a region that the quota of slaughtering should be set in accordance with the number of cattle population. Furthermore, dummy location had significant differences which meant that each location had different pattern of beef cattle development.

**CONCLUSIONS**

The development of beef cattle in Java should be directed to areas that suitable for corn and soybean crops. Furthermore, the price of beef per kg of live weight which was an incentive instrument for beef cattle farmers can be used as a basis for policy making in order to encourage the development of beef cattle farming, likewise beef cattle slaughtering in a region. Overall, the availability of resources in each region should be considered in the development planning of beef cattle farming.
