PREFACE .................................................................................................................. iii
REPORT FROM ORGANIZING COMMITTEE ....................................................... iv
WELCOME ADDRESS .......................................................................................... v
OPENING REMARKS ........................................................................................... vi
LIST OF CONTENTS .............................................................................................. vii

## PART I

### PLENARY SESSION

1. Asian livestock: Opportunities, challenges and the response  
   Vinoj Ahuja .............................................................................................................. 1 – 5

2. Cattle extension programs and research for tropical agriculture  
   Dale R. ZoBell ........................................................................................................... 6 – 10

3. The revolving fund system in sustainable community development  
   Grant Davidson, and E.R. Ørskov ........................................................................... 11 – 18

4. Intensification of smallholder livestock production: Is it sustainable?  
   Hendrik M.J. Udo and Fokje Steenstra ................................................................... 19 – 26

5. The development of Danish agriculture and agribusiness: Lessons to be learned in a global perspective  
   Henning Otte Hansen and Mogens Lund ................................................................... 27 – 35

6. Genome research of gut bacteria, how to analyze and how to apply?  
   Tohru Suzuki, Kouta Sakaguchi, and Kazumasa Yasui ............................................ 36 – 40

7. Animal production in Thailand: Challenges and potentials in global market  
   Yanin Opatpatanakit .............................................................................................. 41 – 49

8. Improvement of forage quality by means of molecular breeding in tropical grasses  
   Takahiro Gondo, Genki Ishigaki, Yasuyo Himuro, Nafiatul Umami and Ryo Akashi 50 – 56

9. Advance research in function and healthy food from animal products – antihypertensive peptides derived from meat protein hydrolysates  
   Michio Muguruma, Jamhari, Yuny Erwanto, and Satoshi Kawahara .......................... 57 – 63

## SUPPORTING PAPERS

### Animal Feed and Nutrition

1. Exploration of pathogenic and non-Pathogenic Fungi on Alfalfa (Medicago sativa L)  
   Turrini Yudiarti, Sumarsono, and Didik Wisnu Widjajanto ........................................ 64 - 67

2. Organic fertilizer application on performance and production of king grass in acid soil  
   Sumarsono, Syaiful Anwar, Didik Wisnu Widjajanto, and Susilo Budiyanto .................. 68 - 71
3. The effect of using earthworm (Lumbricus rubellus) meal additives as growth promoters on protein digestibility and performance of intestinal villi
   Hardi Julendra, Zuprizal, and Supadmo ............................................................... 72 – 78

4. Fermentation of Jatropha kernel cake (Jatropha curcas L.) using varieties of fungi on its chemical compositions, concentration of phorbolester, and digestibility
   Fatmawati, Hari Hartadi, and R. Djoko Soetrisno ......................................................... 79 – 88

5. Effect of protected crude palm oil on rumen microbial activities and methane production
   Nafly C. Tiven, Lies Mira Yusufi, Rusman, and Umar Santoso ........................................ 89 – 94

6. Fermentation parameters and total gas production of some rumen protected fat-protein

7. Dietary energy utilization of Local Sheep fed complete feed consisting of agricultural and agroindustrial by-products

8. Reduction of phytic acid and aflatoxin content of rice bran through fermentation
   rhizopus spp. Combined with deproteinated-chitin waste addition
   Ahmad Sofyan, Ema Damayanti and Hardi Julendra .................................................... 104 – 108

9. Implementation of fermented rice bran as flavor enhancer additive and its effect on feed utilization and cattle performance
   L. Istiqomah, A. Febrisiantosa, A. Sofyan, and E. Damayanti ......................................... 109 – 114

10. The use of kume grass (sorghum plumosum var. timorense) bioconverted with white-rot fungi (pleurotus ostreatus) fed on Local Goat in East Nusa Tenggara

11. The use of local-fodder based supplement and agricultural by-product for cattle

12. The use of kume grass (sorghum plumosum var. timorense) to substitute king grass
    (perinisetum purpurenoids) fed on Bali Cattle in East Nusa Tenggara

13. The use of zeolite in low protein diet added with critical amino acids to reduce pollution
    Candra Elia Puspasari, Wihanidyo, and Supadmo ......................................................... 124 – 148

14. Effects of substitution of Elephant grass by corn waste and coffee pulp as basal diet on nutrient intake and digestibility in young male Ongole crossbred cattle
    Dicky Pamungkas, Ristianto Utomo, Nono Ngadiyono, and Muhammad Winugroho .......... 129 – 134

15. Effect of lactic acid bacteria inoculants applications to the quality and chemical composition silage waste of carrot plant (Daucus carota)
    Badat Muwakhid ............................................................................................................. 135 – 140

16. The content of phytoestrogen on legume plants
    Batseba M.W. Tiro, Suwijiyo Pramono, Hari Hartadi, Djoko Soetrisno, and
    Endang Baliarti ................................................................................................................. 141 – 145

17. Chemical composition and digestibility(in vitro) of cocoa pod husk (theobroma cocoa l.)
    Fermented with aspergillus niger
    F.F. Munier, H. Hartadi, and I.G.S. Budisatria .................................................................. 146 – 154
18. Intake and digestibility of feed in lamb of Sumatera composite breed when the commercial concentrate diet were substituted by gliricidia dan rice bran
Dwi Yulistiani and Wisri Puastuti .............................................................. 155 – 158

19. Fermentative gas production of different feeds collected during wet and dry seasons when incubated with rumen fluid from Rusa Timor (Cervus timorensis)
M. S. Arifuddin, R. Utomo, H. Hartadi, and Damry .................................... 159 – 164

20. Effect of fed complete feed plus on quality and milk production of dairy cow

21. In Vitro gas production of fermented cacao pod (Theobroma Cacao) added with celluololitic inoculum from cattle rumen fluid
Chusnul Hanim, L.M. Yusiati, and V.P. Budayastuti ..................................... 171 – 176

22. Hibiscus Schizopetalus as saponin source, reduce protozoa number and increase microbial protein synthesis on in vitro sheep rumen fermentation
Asih Kurniawati and Nafiatur Umami .................................................. 177 – 182

23. The effect of gliricidia or mixture of rice bran and copra meal supplementation on feed intake, digestibility and live weight gain of early weaned Bali Calves fed A, Mulato grass
Marsetyo, Muhammad Ilyas Mumu, and Yohan Rusiyantono ....................... 183 – 188

24. A comparison of feeding management practices of beef cattle smallholders in lowland and upland sites in East Java

25. The effect of ketepeng cina leaf (cassia alata) I, as a source of anthraquinone, methanogenesis inhibitor agent on rumen microbial protein synthesis for beef cattle in Sedyo Rukun farmer group
Lies Mira Yusiati, Zaenal Bachrudin, Chusnul Hanim, and Lila Indriana ........ 196 – 200

26. The effects of feed restriction severity on compensatory growth of goat kids in Bushehr Province, Iran
Mahmoud Dashtizadeh, Azizollah Kamalzadeh, Mohammad Hadi Sadeghi, Amir Arsalan Kamali, and Abdolmehti Kabirifard ...................... 201 – 207

27. Fermentation quality of king grass (Pennisetum purpureophoides) ensiled with epiphytic lactic acid bacteria and tannin of acacia
B. Santoso, B. Tj. Hariadi, H. Manik and H. Abubakar ..................... 208 – 214

28. The effect of methionine on glutathion production to eliminate aflatoxin B1 toxicity
Yunianta, Ali Agus, Nuryono, and Zuprizal ............................................. 215 – 220

29. Rice bran fermentation tecnology and soya bean oil supplementation of transfer protection fatty acid omega-3 of unsaturated fatty acids conten of milk dairy cow
Sudibya .......................................................... 221 – 226

30. Growth performance and blood profile of african cat fish fed sweet potato (ipomoea batatas) leaf meal
Olaniyi Christianah Oludayo ................................................................. 227 – 232

31. Application of complete feed formulated from agriculture by-products with undergraded protein supplementation on beef cattle productivity
Bambang Suhartanto, B.P. Widyobroto, I.G.S. Budisatria, Kustantinah, and R. Utomo ................................................................. 233- 238
32. The effect of green tea extract (Camellia sinensis) supplementation on blood profiles and lipid oxidation in broilers fed high PUFA diet
   Isti Astuti, Supadmo, Sugeng Riyanto, Supriyadi ............................................. 239 - 242

33. The role of lactic acid bacteria on silage duration process and rumen content silage quality
   Isnadar, R. Utomo, S. Chuzaemi, E. Sutariningsih, and L.M. Yusiati .......................... 243 - 249

34. Replacing enzose by corn grains: impact on nutrients utilization and weight gain in growing buffalo calves
   M. Nisa, M. Aasif Shahzad, and M. Sarwar .................................................................. 250 - 256

35. Nutrients utilization, nitrogen dynamics and weight gain in growing buffalo calves fed graded replacement of urea by corn steep liquor
   M. Aasif Shahzad, M. Nisa, and M. Sarwar .................................................................. 257 - 261

36. Production and nutritive value of mulberry hay as potential feed supplement for ruminants
   Z.A. Jelan and A.R. Alimon ......................................................................................... 262 - 265

37. The retention of copper in sheep fed palm kernel cake supplemented with molybdenum, molybdenum plus sulphur and zinc
   A.R. Alimon, R.A. Al-kirshi and Z.A. Jelan ................................................................. 266 - 268

38. Utilization of complete feed based on fermented rice straw for Australian commercial cross steer on carcass and meat quality
   Bambang Suwignyo, Ristianto Utomo, Yuny Erwanto and Ali Agus .......................... 269 - 273

39. The measurement of rate of passage using different pairs of alkane as markers for sheep fed hay or fresh grass
   A. Kustantinah, R.W. Mayes, and E.R. Orskov ............................................................ 274 - 281

40. Aflatoxin m1 excretion in the milk of tropical dairy cow fed contaminated aflatoxin b1 in the diet

Poultry Production

1. The interaction of dietary lysine and temperature on egg laying performance of broiler breeders
   Abdulameer Al-Saffar ................................................................................................. 286 - 290

2. Digestible methionine requirement for performance and carcass yield of broiler finisher
   N.G.A. Mulyantini ........................................................................................................ 291 - 295

3. Resource use efficiency in poultry production in Bureti District, Kenya

4. In vitro evaluation of phytogenic potential of seed from mango (Mangifera indica), moringa (Moringa oleifera) and sweet apple (Annona squamosa) for poultry
   Rusdi, Asriani Hasanuddin, Rosmiaty Arief .................................................................. 303 - 307

5. The effect of adding vitamin C and E in native chicken semen extender stored at temperature 4 °C on semen quality and egg fertility
   Widya Asmarawati, Ismaya, and Tri Yuwanta ............................................................. 308 - 313

performance and shell quality in layer chickens
Bayu Sesarahardian, Osfar Sjofjan and Eko Widodo ........................................... 398 - 402

PART II

Livestock Production

1. Exterior characteristics of Kejobong goats kept by farmers

2. The effect of goat-sharing system on the performance of farmer groups raising etawah cross bred goats – a case study in ‘Sukorejo’, Girikerto, Turi, Sleman
Yuni Suranindyah, Kustantinah, and E. R. Orskov ..................................................... 411 – 414

3. Growth and carcass production of Ongole grade cattle and Simmental Ongole crossbred cattle growing in a feedlot system
Mateus da Cruz de Carvalho, Nono Ngadiyono, and Soeparno ................................ 415 - 422

4. Available herbage sustainability under soil and water conservation for development of small ruminants
Sutarno, Sumarsono, Widiyati Slamet, and Didik Wisnu Widjajanto ......................... 423 – 426

5. A study on some aspects of equine husbandry in the Punjab-Pakistan
Arshad Iqbal, Asit Hameed, M. Younas, Bakht B. Khan and S. A. Bhatti .................. 427 – 432

6. Feeding strategies to increase growth of early weaned Bali calves in East Java

7. Response of brahman crossbred cows and their calves kept under semi-intensive and fed them on local-fodder supplement in east Sumba Regency, East Nusa Tenggara Province

8. The relationship between heart-chest girth, body length and shoulder height, and liveweight in Indonesian goats
Asmuddin Natsir, Mawardi A. Asja, Nasrullah, Yusmasari, A. Nurfayu, Peter Murray, and Roy Murray-Prior .......................................................... 441 – 445

9. Growth performance of Ongole grade (Peranakan Ongole) cattle in Indonesia
Budi Haryanto and Dicky Pamungkas ................................................................. 446 - 451

10. Growth of carcass and carcass component of different slaughter weight of local ram
A.E. Manu, M.M. Kleden, S.A. Adjam, J.J.A. Ratuwaloe and Y.L. Henuk ............ 452 – 454

11. Postpartum productivity of Simmental-Ongole crossed cows of the first generation compared to Ongole crossed cows kept by farmers
E.Baliarti, W.T.H.M. Christoffor, and Soenardi ....................................................... 455 - 459
12. The effect of supplementation of different lysine sources on the performance of weaned pigs from 4 up to 10 weeks of age
   Risel Diana H. Likadja ............................................................... 460 - 463

13. Effect of fiber source on the performance of weaned pigs from 4 up to 10 weeks of age
   Johannis Ly and Risel D.H. Likadja ............................................ 464 - 467

14. Influence the improvement of cattle feedlot production system to increase the welfare of feedlot farmers group in Indonesia through the implementation of integrated sustainability farming system
   Joko Riyanto, Susi Dwi Widyawati, and Wara Pratistis .................... 468 - 473

15. Breeding Bos tasaicus d’Alton cattle in eastern Indonesia: cattle growth
   Totok B. Julianto, Tanda Panjaitan, Geoffry Fordyce, and Dennis Poppi ...... 474 - 477

16. Breeding Bos javanicus d’Alton cattle in eastern Indonesia cattle control, diets, draught use and feeding
   Tanda Panjaitan, Geoffry Fordyce, Dennis Poppi ................................ 478 - 482

17. Breeding Bos javanicus d’Alton cattle in eastern Indonesia: Monitoring village cattle
   Dennis Poppi, Tanda Panjaitan, Dahlauddin, and Geoffry Fordyce ............ 483 - 487

18. Application of non linear models in estimating growth curves of body weight and sizes of Holstein-Friesian female cattle
   Nia Kurniawan, and Anneke Anggraeni ........................................... 488 - 496

20. Diversity on the exterior performance of crossbred cattle kept by farmers in central java

21. Alternative control for endoparasites infection in goats by feeding fresh matured and immature leaves of terminalia catappa
   Mohd Azrul Lokman, and Mohd Effendy Abd. Wahid ............................ 509 - 514

22. Growth of nine month old male buffalo calves as affected by different crude protein and energy concentrations
   M. Sarwar, M. A. Shahzad, N.A. Tauqir, and M. Nisa .......................... 515 - 520

23. Performance of lactating buffaloes as affected by varying concentrations of essential amino acids
   N.A. Tauqire, M.A. Shahzad, M.Nisa, M.Sarwar, H.A. Saddiqi, M. Fayyaz, and M.A Tipu ... 521 - 526

Animal Physiology, Reproduction, and Genetics

1. Seasonal investigation of serum magnesium concentration in native cattle at Western Azerbaijan Province, Iran
   M.R. Valilou and A.R. Rotfi .......................................................... 527 - 530

2. Detection of Toxoplasma gondii based on sequence r529 and sag1 gene probe
   Asmarani Kusumawati, Harto Widodo, Nafratilova Septiana, and Sri Hartati .......... 531 - 534

3. Reproductive performance of dairy cows in Yogyakarta Province based on balanced ration given
   Ahmad Pramono, Kustono, and hari Hartadi ........................................... 535 - 540
4. Breeding programme development of Bali cattle at P3Bali
   Andoyo Supriyantono, Luqman hakim, Suyadi, and Ismudiono ........................................ 541 - 546

5. Friesian holstein imported cows: physiological character and blood composition based on altitude difference
   Ratna Dewi Mundingsari, Adiarto, and Soenarjo Keman .......................................................... 547 – 551

6. Breeding value of Friesian Holstein bulls in PT. Naksara Kejora Rowoseneng, Temanggung, Central Java
   Hasyim Mulyadi, Indrawati Mei P., and RR. Mahardika N.P. ...................................................... 552 – 555

7. Genetic potency of weaning weight of boerawa F1, backcross 1, and backcross 2 does at breeding centre, Tanggamus Regency, Lampung Province
   Sulastri .............................................................................................................................................. 556 – 560

8. Distribution of population and production estimate of some cattle breeds at Yogyakarta Province, Indonesia
   Sumadi, Tety Hartatik, and Sulastri .................................................................................................. 561 – 564

9. In vitro fresh sperm preparation for maintaining sperm viability at storage temperature of 14°C using tannin supplementation of lamtoro leaves
   Mirajuddin, Kustono, Ismaya, and A. Budiyanto ............................................................................... 565 – 571

10. Phenotype and phylogenetic studies of local cattle in pacitan district, East Java, Indonesia
    Muhammad Cahyadi, and Tety Hartatik ............................................................................................ 572 – 577

11. The exploration of genetic characteristics on Madura cattle

12. Breeding Bos javanicus d’Alton cattle in Eastern Indonesia: Cattle reproduction
    Geoffry Fordyce, Tanda Panjaitan, Totok B. Julianto, Eliza Kurtz, and Dennis Poppi ...................... 585 - 589

13. Improvement quality of Bligon goat sperm through separation by albumen
    Sigit Bintara, Soenarjo Keman, Sumadi, and Ali Agus .................................................................... 590 – 594

14. Correlation between plasma progesterone concentrations and fecal Progestins during the estrus cycle of Kedah Kelantan cows

15. Effect of PGF2α, or CIDR on ovarian follicular development during estrous cycle in goats
    Muhammad Modu Bukar, Rosnina Yusoff, Abd Wahid Haron, Gurmeet Kaur Dhaliwal, Mohammed Ariff Omar, Nur Husien Yimer, Mohd Azam Khan Goriman Khan ........................................................................................................ 599 – 602

16. The use of frozen semen of Holstein-Friesian bulls with the BB genotype of the kappa casein gene in Indonesia
    A. Anggraeni, C. Sumantri, and E. Andreas .................................................................................. 603 – 608

17. Effect of haylage made of kume grass standinghay fermented with liquid palm sugar and local chicken manure on semen quality and scrotum circumference of male local goat
    Henderiana L.L. Belli and Nathan G.F. Katipan .............................................................................. 609 – 613

18. The early identification of twinning trait genes on Indonesian local beef cattle
    Aryogi, Endang Baliarti, Sumadi, and Kustono .............................................................................. 614 - 622
Technology of Animal Products

1. The development of ripened cheese containing lactic acid bacteria: the effect on chemical composition, acid production and sensory value  
   Tridjoko Wisnu Murti .......................................................... 631 – 637

2. The restructured of local beef of low quality with different binders, fat emulsifiers and fortification with vitamin a in beef burger 
   Setiyono and Soeparno .......................................................... 638 – 643

3. The using of extract rabbits stomachs in the making goat milk cheese ripened with Lactobacillus Acidophilus 
   Inda Dewata Sari, Nurliyani and Indratningisih ........................................... 644 – 648

4. Effect of broiler age and extraction temperature on characteristic chicken feet skin gelatin 
   Muhammad Taufik, Suharjono Triatmojo, Yuny Erwanto, Umar Santoso .......................... 649 – 656

5. Quality changes of burger from vegetable, wheat flour, rice flour with fat emulsion during frozen storage 

6. Polymerization of meat and Tempeh protein using transglutaminase and their potency as an antihipertency and antioxidant agent 
   Yuny Erwanto, Jamhari dan Rusman ....................................................................... 663 – 670

7. The application of local dahlia tuber (Dahlia pinnata L.) as prebiotics for improving viability of probiotics Bifidobacterium bifidum in yoghurt 
   Widodo, Nosa Septiana Anindita, Endang Wahyuni, and Indratningisih .......................... 671 – 676

Extension, Community Development and Agribusiness

1. Elephant Camps and their impacts to community: Case study in Keud Chang, Chiang Mai Province, Thailand  
   Weerapon Thongma and Budi Guntoro ........................................................................ 677 – 682

2. Soft technology innovation for farmer empowerment to bring about practice change in an agricultural r&d project: lesson learnt from Eastern Indonesia 
   Nurul Hilmiati, Elske van de Fliert, Medo Kote, Debora Kana Hau, Toni Basuki .......................... 683 – 690

3. The effects of dairy cattle ownership and farmers’ demography factors on the evacuation moving farmers’ behavior at Merapi volcano area (case study at Kaliadem Sub Village, Yogyakarta, Indonesia) 
   Siti Andarwati and F. Trisakti Haryadi ........................................................................ 691 – 694
4. Farmers’ profile and exterior characteristic of female Moa Buffaloes in Moa Island, Maluku Province

Justhinus Pipiana, Endang Baliarti, and I Gede Suparta Budisatria ........................................ 695 - 701

5. Economic analysis of on-farm feeding strategies to increase post-weaning live weight gain of Bali calves

Atien Priyanti, Simon Quigley, Marsetyo, Dicky Pamungkas, Dahlauuddin, Esnawan Budisantoso, and Dennis Poppi .............................................................. 702 - 708

6. The role of livestock service in order to cattle agribusiness development in regency of Kupang

Maurinus Wilhelmus Gili Tibo ...................................................................................................... 709 - 716

7. Factors with the purchase of meat by consumers in Makassar, Sulawesi

Nasrullah, Yusmasari, A. Nurhayu, Asmuddin Natsir, Mawardi A. Asja, Roy Murray-Prior, and Peter Murray ................................................................. 717 - 724

8. Goat supply from Enrekang, South Sulawesi to East Kalimantan: a long and winding road

Mawardi A. Asja, Asmuddin Natsir, Roy Murray-Prior, Peter Murray, Nasrullah, Yusmasari, and A. Nurhayu ................................................................. 725 - 732

9. Goat meat consumption in Makassar, Sulawesi: Important for religious and cultural ceremonies, but many consider it a health risk

Roy Murray-Prior, Asmuddin Natsir, Mawardi A. Asja, Nasrullah, Yusmasari, A. Nurhayu, and Peter Murray ................................................................. 733 - 740

10. Marketing practices of smallholder beef cattle producers in east Java

I. G. A. P. Mahendri, A. Priyanti, V. W. Hanifah, and R. A. Cramb ................................................................................................................. 741 - 746

11. Empowerment of goat farming: Lessons learnt from the development of goat farming group of Peranakan Etawah Gumelar Banyumas

Akhmad Sodiq .............................................................................................................................. 747 - 752

12. Performance of credit program to small dairy cattle development in Indonesia

Rini Widiati .................................................................................................................................. 753 - 758

13. Analysis of demand of broiler meat in Central Java

Nurdayati, Sudi Nurtini, Masyhuri, and Rini Widiati .................................................................. 759 - 762

14. Decision making model analysis of technology adoption: empirical study on milk pasteurization retailer behavior

Januar Tri Sukarna, Suci Paramitasari Syahli, and Ahmadi ......................................................... 763 - 766

15. An education management model based on cognitive learning for small dairy farmers in the tropics

Viriya Munprasert, Phahol Sakkatat, Varaporn Punyavadee, Siriporn Kiratikarnkul and Dumrong Leenanuruksa .............................................................................. 767 - 770

16. Participation of women farmers on beef cattle farming management in Pandan Mulyo Group, Bantul, Yogyakarta

Ida Wulandari, Budi Guntero, and Endang Sulastri ..................................................................... 771 - 777

17. The sources of dairy cows and concentrate feed among the dairy farmers in Sleman Regency, Yogyakarta

Endang Sulastri and Budi Guntero ............................................................................................... 778 - 780
18. Information access among chicken and cattle farmers in Gunung Kidul Yogyakarta and
Ngada East Nusa Tenggara
Budi Guntoro, Fathul Wahid, Ali Agus, and Stein Kristiansen ........................................ 781 – 784

Reviews

1. The use of gewang tree (corypha elata roxb) as feed for livestock in the tropics
Maritje A. Hilakore, U Ginting-Monthe, and Y.L. Henuk .................................................. 785 – 789

2. Optimizing nutrition of commercial livestock for minimal negative impact on the
environment through precision feed formulation

ABSTRACT: This explorative trial was conducted to study the main characteristics of AFB1 excretion in Indonesian lactating dairy cows. Five Indonesian Frisian Holsteins were received a ration with base of AFB1 intake of 306.5 µg/cow/day. An AFB1 inclusion treatment was designed by crude AFB1 addition to perform levels of inclusion of 0; 50; 100; 250; and 250 µg AFB1/kg of contaminated diet. The contaminated diets were offered for 21 days. The observed parameters were AFB1 intake, AFM1 content, and the proportion of AFB1 excretion into AFM1 in milk. Results indicated that AFM1 rapidly appeared in milk and the content of AFM1 tended to increase with higher level of AFB1 inclusion, namely 44.4; 61.0; 63.2; 66.9 and 70.0 ng/kg for the treatments of 0; 50; 100; 250 and 500 µg AFB1/kg, respectively. The proportions of AFB1 excretions were ranging from 0.08 to 0.20% which was relatively low comparing to the previous studies for sub tropical cows.

Key words: AFB1 contamination, AFM1 excretion, tropical dairy cow

INTRODUCTION

High ambient temperatures and high relative humidity in tropical regions such as in Indonesia are highly favourable for the development of certain fungus to produce mycotoxins. Aflatoxin B1 (AFB1) produced by Aspergillus flavus and A. parasiticus was recognised as the most toxic mycotoxins and exposures of this toxin to human or animal cause chronic or acute consequences. Since AFB1 in feed can be transferred into the milk as its hydroxylated metabolites, aflatoxins M1 (AFM1), the contamination of aflatoxins in animal feeds has become more crucial for most of dairy farms. Testing in animal laboratory indicated that AFM1 has a similar toxicity and carcinogenicity to AFB1 (van Egmond, 1989). The presence of AFM1 may consumption of milk and milk products to be one of the principal ways by which aflatoxin is introduced to human diet (Galvano et al., 1998).

Previous studies on Indonesian agricultural products indicated high occurrences and levels of AFB1 contaminations (Ali et al., 1998; Goto et al., 1999). Those results were confirmed by high occurrence of AFM1 contamination in fresh milk samples surveyed by Nuryono et al. (2009). In their study, all of the samples were found contaminated by AFM1, however none of samples containing the toxin exceeded European Union regulation (50 ng/kg milk). Those findings showed that in the milk of Indonesian dairy cows, the occurrence of AFM1 contamination was supposed high but the levels of contamination was supposed low. Filaeli (2007) surveyed both feed and milk of Indonesian Frisian Holstein and found that the percentages of AFB1 excretion into AFM1 in milk were ranging from 0.08 to 2.69%. In this present study, we carried out an explorative research to determine the effect of levels of AFB1 inclusion to the proportion of AFM1 excretion in the milk of Indonesian dairy cows.

MATERIAL AND METHOD

Five Indonesian Frisian Holstein which were in the mid of lactation stage were used in the experiment. The basal diet was Napier grass and supplemented with 6 kg/cow/day of concentrate

1 The authors would express their sincere thanks to the funding of the project through the Hibah Kompetitif Penelitian untuk Publikasi Internasional Tahun Anggaran 2009, Directorate General of Higher Education, Ministry of National Education Contract number 469/SP2H/PP/DP2M/VII/2009. Also to Sugiyarto for his work in keeping and handling the cattle and Rosita for the administration of research project, their helps in running the project were highly appreciated.
feed. Every cow received different levels of AFB1 inclusion. Inclusion of AFB1 in the feed was carried out by the addition of crude AFB1 source in the concentrate feed in certain amounts for making the levels of inclusion were 0; 50; 100; 250; and 500 µg/kg. Crude AFB1 was produced by A. flavus isolate which was inoculated in the combination of corn and ground peanut as substrate according to the procedure which was described by Ali Agus et al. (2010). The experiment was conducted in 4 weeks which were divided as inclusion period (week 1-week 3) and clearing period (week 4). Cows were milked two times a day in the morning and afternoon. Milk samples from morning and afternoon milking were pooled proportionally and sampled for AFM1 analysis by ELISA test. ELISA tests were performed using ELISA test kits for AFB1 (Ridascreen® Aflatoxin B1 30/15 R-Biopharm AG, Germany) and AFM1 (Ridascreen® Aflatoxin M1 30/15 R-Biopharm AG, Germany). Parameters observed in this experiment were AFB1 intake, AFM1 content in the milk, and the proportion of AFB1 excretion into AFM1 milk. Data was analysed descriptively to study the effect of levels of AFB1 inclusion in Indonesian Frisian Holstein (tropical dairy cow) comparing to similar study using sub tropical dairy cow.

RESULTS AND DISCUSSION

AFB1 Intake

ELISA test for AFB1 in the samples of concentrate feed showed that concentrate used in the experiment containing AFB1 51.08 µg/kg. Therefore, consumption of offered concentrate (6 kg/cow/day) contributed on intake of AFB1 equal to 306.5 µg/cow/day. Table below shows the average of AFB1 intake during the inclusion period. The amount of AFB1 intake was counted up from the concentrate and the source of crude AFB1 (inoculated corn-ground peanut).

Excretion of AFM1 in the Milk

AFM1 appeared in the first milk sample (the 2nd day of inclusion period) and still detected until 5 days after AFB1 was removed from the diet. The figure 1 below shows the pattern of AFM1 excretion in milk.
The averages of AFM1 content were 44.4; 61.0; 63.2; 66.9 and 70.0 ng AFM1/kg milk for the levels of AFB1 inclusion of 0; 50; 100; 250 and 500 µg AFB1/kg contaminated feed respectively.

**Proportion of AFB1 excretion into AFM1 in milk**

The proportions of AFB1 excretion into AFM1 in milk were ranging from 0.08 to 0.2%. The comparison of these percentages between treatments is presented in the following figure:

![Figure 2. The proportion of AFB1 excretion into AFM1 in milk of cows treated with different levels of AFB1 inclusion](image)

ELISA test showed that the concentrate feed which was used in the trial containing 51.08 µg AFB1/kg and resulted in a base of AFB1 intake of 306.5 µg per day for each cow. This study revealed a difficulty to obtain an AFB1 free diet for dairy cows in Indonesia and might lead to high occurrence of AFM1 contamination in fresh milk sample, such as in survey shown by Nuryono et al. (2009).

AFM1 was detected in the first milk sample after cows consumed contaminated diet. This result was in agreement with previous studies which indicated that AFM1 appears in the first milk samples after AFB1 ingested by the cow (Diaz et al., 2004; Masoero et al., 2007). Due to its low molecular weight, aflatoxins are rapidly absorbed through membranes by a passive mechanism (Yiannikouris and Jouany, 2002), and could be detected in the plasma as soon as 15 minutes after AFB1 intake (Moschini et al., 2008).

There was no steady state of AFM1 concentrations observed and the concentrations tended to slightly increase during the inclusion period. This result was conflicting to previous studies that showed a steady state of AFM1 concentration was reached in 2-3 days after treatment of AFB1 (van Egmond, 1989).

A higher level of AFB1 inclusion seemed to result in a higher AFM1 concentration in milk. Among the treatments of AFB1 inclusion, only the 0 µg/kg treatment resulted in a concentration of AFM1 (44.4 ng/kg) below the threshold for AFM1 in dairy products regulated by EU (50 ng/kg). Furthermore, this result illustrated a practical situation in Indonesian dairy farming, especially for small holder farmer, which is supposed used feedstuffs contaminated by AFB1 and produces milk contaminated by AFM1.

The proportion of AFB1 excretion into AFM1 in milk in this study was ranging between 0.08-0.2%. Numerous studies had been carried out for sub tropical dairy cow and revealed that the carry over of AFB1 feed into AFM1 in milk to range from 1% to 3% in lactating dairy cows and to be principally affected by milk yield (Diaz et al. 2004; Van Eijkeren et al. 2006; Masoero et al. 2007), with a reported maximum value of about 6% (Veldman et al., 1992). Some cow variables affect on the carry over rate of AFB1 as follows: levels of contamination (van Egmond, 1989), stage of lactation...
(Veldman et al., 1992), milk yield (Masoero et al., 2007), species differences (Battacone et al., 2003) and individual variability (van Egmond, 1989).

The cows used in this study were in the mid of lactation period with milk production between 5-11 kg/cow/day. The differences in cow variables and a long experienced in AFB1 exposure seemed to be the main factor in low carry over rate of AFB1 for Indonesian dairy cow.

CONCLUSION

This study confirmed a rapid excretion of AFB1 metabolite in milk after AFB1 ingestion by the cows. A higher AFB1 intake clearly resulted in a higher AFM1 concentration in milk. However, this study indicated a low of the proportion of AFB1 excretion into AFM1 in milk. Differences in cow variables and long term experience in AFB1 exposure might be the reason for low carry over of AFB1 in Indonesian Frisian Holstein compare to the results in sub tropical dairy cow.
