Assalamualaikum warohmatullahi wabarakatuh

Distinguished Guests and Delegates, Ladies and Gentlemen,

It gives me great privilege and pleasure to extend to you all a very warm welcome on behalf of Brawijaya University and to say how grateful we are to the organizing committee of The Third Animal Production International Seminar (3rd APIS) and The Third ASEAN Regional Conference on Animal Production (3rd ARCAP) who made this important event happening from today onward. Your attendance in this conference will not be enough before exploring the serendipity of Batu city which has attracted so many visitors in the recent years. It offers you many attractive places to visit varying from leisure facilities to smallholder dairy farms that relevant to the topic of this conference.

The issues of livestock production and food security have been a hot topic of debates all over the world to challenge our capability to feed human population living on earth that is believed will reach 25 billion people by the middle of this millineum. The global call on quality human resources especially in developing countries may not be achieved without adequate supply of animal protein. This has urged animal scientists to make significant effort to increase animal production by inventing new technologies and approaches but have no negative impact on our natural resources because the majority of smallholder farmers face with scarcity of cultivable land to produce adequate quantity and quality fodder for their animals. The practice of uncontrolled fodder scavenging from forest and open land may provoke a serious natural disaster such as landslide, flood and loss of water resources for human beings. Through this stage I would like to extend my concern to all distinguished guests and delegates to pay more attention on sustainable development of animal production that assures our young generation lives on earth safely and happily.

As the rector of Brawijaya University, I am also delighted to welcome you in our green campus sometime in the middle of the conference to hasten mutual collaboration between Brawijaya University and either national or international partners. We are fully aware that in a modern life higher education quality should be built on the basis of collaboration for many reasons. Brawijaya University has 14 faculties that can be grouped into four science trees, that is engineering, humanity, economics, and life sciences. They have been growing significantly not only in the number of student enrollements but many prestigious achievement on research findings, student competitions and administrative transparency are our flagships in the last ten years. Nevertheless, we also realize that first and foremost constraint for any institution is the limit of resources and thereby underpinning the importance of establishing mutual collaboration. It is our opportunities to meet delegates from varying places of origin that open initial discussion for further networking on relevant topics of interests concordance to the main topic of this conference and beyond.

To conclude my address, once again I would like to express my sincere gratitudes to all delegates, partners and conference committee who have made this important international conference occurs. I do hope that your stay and participation in these seminar and conference will be fruitful and unforgettable.
By the name of Almighty Allah Swt. I declare that The Third Animal Production International Seminar (3rd APIS) and The Third ASEAN Regional Conference on Animal Production (3rd ARCAP) are officially open.

Thank you very much
Wassalamualaikum warohmatullahi wabarokatuh.

Batu, 19 October 2016
Brawijaya University
Rector

Prof.Dr.Ir. Mohammad Bisri, MS.
Assalaamu’alaikum wr. wb.

Praise be to Allah, that the International Seminar 3rd-APIS could be held this year. This seminar is a routine agenda of the Faculty of Animal Husbandry UB held every three years, and this time held on October 19 to 21, 2016.

For participants come from outside the city of Malang, I proudly would like to say Welcome to the city of Malang and also on the beautiful campus of the University of Brawijaya, especially in the Faculty of Animal Husbandry. I'm sure the cool atmosphere of Malang and Batu, the participants will be able to feel a distinct impression and more enthusiastic in participating in the seminar.

When we viewed from a trip APIS, we note that there is significant progress in every APIS’s event. It can be noted by increasing the number of participants who submit their abstract / full paper and spread of country or university / institution they came from. This shows that the APIS is increasingly recognized by the researchers or academics community, and but on the other hand might be the number of researchers who want to publish scientific work is also increased.

Now, APIS not only belong to the Faculty of Animal Husbandry University of Brawijaya, but also belong to the universities and researchers in the world who require publish their qualified scientific paper immediately.

APIS is a very effective medium to introduce each other between researchers, as well as a very efficient medium for the information and experiences exchange among the participants. Through the APIS we can know the topics of research being conducted by other researchers in different regions or countries, so that we can develop our future research directions and topic. We can also use APIS meeting as a medium for constructing the research collaboration and networking with researchers from other institutions for strengthening our research foundation. By APIS meeting, some information about new and important problems in the livestock farming and their solutions in the field can be summarized, so it is be expected to be able to overcome some of the problems of animal farming. I am sure, that the scientific information presented in APIS are very important way out of various scientific problems and in practical condition. So that by referring to the new findings of the researchers stated in their scientific works will be able to immediately increase the efficiency of farm businesses and increase in profits for farmers.

Finally, we congratulate to have nice conference and wish all participants having good days for a better future.

Thank you,
Malang, October 13, 2016

Dean of the Faculty of Animal Husbandry
University of Brawijaya

Prof. Dr.sc.agr. Ir. Suyadi, MS.
Following the success of the First and Second Animal Production International Seminar (1st and 2nd APIS) held in 2010 and 2013, respectively, and based on the proposition during the International Representatives Steering Committee Meeting, The ASEAN Regional Conference on Animal Production (ARCAP) Committee, and Malaysian Society of Animal Production (MSAP), hence, it will be held Collaborative Seminar of The Third Animal Production International Seminar (3rd APIS) and The Third ASEAN Regional Conference on Animal Production (3rd ARCAP) at Shining Batu city, East Java Province, Indonesia from 19 to 21 October 2016 with the theme of Improving the Synergistic Roles of Stakeholders for Development of Sustainable Livestock Production.

Sustainable development has become globally interesting issue in the last decades, since the environmentally failure of green revolution in agriculture and in some other aspects of development. The developments have been blamed to result in environmental degradation and global climate change (global warming) that dangers for the sustainability of life. Hence, the concept of sustainable developments that are environmentally, economically, socially and finally lively friendly must be practiced in all aspects of development, and as a never ending process to result in the most promising outputs for either the present or the future sustainable lifes.

Livestock production is very well known to have very important and strategic roles for human life as well as the environment. Livestock production is as important source of high quality foods for human, where its requirement must continuously increase and cannot be stopped due to the continuous increase of the human population. Livestock production provides income for most of small farmers in the villages and industries. Livestock also functions as traction, fertilizer, investment or saving, social prides, wool, and fur. However, livestock production has recently been blamed for its contributions to the land degradation and the global climate changes. Livestock production has been blamed to degrade 70% of rain forest area in Amazon, contributes 18% of green house gas, and competing in the use of potential materials either for human food or renewable fuel.

Thus, to improve the important and strategic functions and contributions of livestock production, it is our great honors and pleasures to invite stakeholders in livestock production including scientists, practitioners, decision makers as well as farmers and industries to attend This 3rd Animal Production International Seminar (3rd APIS) and The Third ASEAN Regional Conference on Animal Production (3rd ARCAP) held in the most interesting agriculture complex and exotic tourism city of Shining Batu, East Java Province, Indonesia from 19 to 21 October 2016. The Shining Batu city that is located in the valley of nonactive volcanoes complex, is also known as the oldest dairy cattle production center in Indonesia and also as livestock production center where small, medium, and large scale of livestock production and industries present including dairy cattle, beef cattle, goat, sheep, poultry, pigs, and rabbits.

The seminar is supposed to be a chance for the participants to discuss and exchange the newest information on animal science and technology for improving the prospects and coping the challenges in animal production for its sustainable development. In addition, the seminar will be as a site in establishing and refreshing contacts among animal scientists as well as practitioners for the development of sustainable livestock production.

We strongly expect your active support and participation for the success of the seminar. Finally, we are looking forward to seeing you all in the most interesting city of Shining Batu and enjoying our wonderful traditions, cultures, cuisines, and scenery.
Bismillahirrahmaanirrohiim
Assalamualaikum wa rohamatullahi wa barokaatuh

Our sincerely Rector of Brawijaya University, Dean of Faculty of Animal Husbandry Brawijaya University, very important invited person, keynote speakers, and all of the participants,

In this opportunity, on behalf of the Organizing Committee, I would like to express my deeply thanks and welcoming all of you to attend this Third Animal Production International Seminar and The Third ASEAN Regional Conference on Animal Production (APIS & ARCAP-2016).

The theme of this seminar is **Improving the Synergistic Roles of Stakeholders for Development of Sustainable Livestock Production**. As all of us are aware that sustainable development in all of aspects of our live are very-very important to create a better live not only for ourselves generation but also more importantly for our next-next-next generations.

Especially for the development of livestock production, it is not only targeted for the production of sufficient quantity of good quality foods including meat, milk, and egg but also to minimize its contribution to the degradation of environment. As it is very well known that livestock production is not only produce many fruitful functions our live but also has been blamed to cause land degradation, water and air pollution, and to contribute to the global climate change.

For those from this seminar we would like to expect that we can give and share our knowledge, technology, and experiences to give our contribution for the development of sustainable livestock production.

As I got the data from our secretary that this seminar is attended by not less than 300 participants from many different countries including Sudan, Iran, Sri Lanka, India, Thailand, Taiwan, Malaysia, Australia, and of course from all over Indonesia from North Sumatera to West Papua; from different discipline of livestock production including livestock production systems, feeds and nutrition, genetic, breeding, and conservation reproduction, environment and waste management, products processing and food safety, socio-economic and agribusiness of livestock, and veterinary and health care; and from different types of stakeholder including scientists, practitioners, decision makers as well as farmers and industries. For those, I would like again to express my deeply thanks to all of the participants. Please, enjoy our seminar and our most interesting city of Shining Batu and enjoying our wonderful traditions, cultures, cuisines, and scenery.

And finally, last but not least, I wish to thank to all sponsors who have contributed for financial support, to our partner institutions and especially to the organizing committee member who have been working very hard to prepare and ensure the success of this international seminar.

Good Luck and Wassalamualaikum wa rohamatullahi wa barokaatuh.

Chairman
Dr. Ir. Marjuki, M.Sc.
Welcome Speech From MSAP President

It is indeed my pleasure to welcome you to the 3rd ARCAP (Asean Regional Conference on Animal Production) to be held in the Shining City of Batu, Malang from 19th – 22th October 2016. Malaysian Society of Animal Production is proud to be a co-organizer of this conference. ARCAP was mooted by the then president of MSAP Dr Abu Hassan Muhammad Ali, in 2013 and the first ARCAP conference was held in Kuching, Sarawak in June 2014. Representatives from Malaysia, Indonesia, Thailand, The Phillipines, Vietnam, Singapore, Laos and Myanmar were among the invited speakers. Brunei and Cambodia has yet to name their representatives. ARCAP was originally planned to be held every two years in different Asean countries but initially this system was not practical as some member countries were not represented during earlier meetings. The formation of ARCAP was to develop a network within the Asean region, providing a platform where scientists and livestock stakeholders can discuss, collaborate and exchange ideas and information on animal production specific to this region. At present ARCAP is somewhat a loose organization of societies of animal production in the Asean region and therefore look forward to receiving voluntary members to be actively involved. MSAP organized the first and second ARCAP conferences, and fortunately the Faculty of Animal Husbandry, Universitas Brawijaya, has volunteered to organize the 3rd ARCAP conference in Batu, Indonesia in conjunction with their 3rd APIS. It is hoped that future ARCAP conferences will be will be hosted by other member countries.

Before I end, I would like to thank the organizing committee, and all those involved, for their hard work to make this joint conference a success. Thanks are due to Faculty of Animal Husbandry, Universitas Brawijaya, for providing all the necessary facilities and support for the success of this conference.

Last but not least, I would like to thank all participants of this conference for your support and enthusiasm and hope that you have a fruitful and enjoyable conference.

Prof Dr Abd Wahid Haron
President MSAP 2016/2017
STEERING COMMITTEE

- Prof. Dr. Sc. Agr. Suyadi, MS. (Brawijaya University, Indonesia)

LIST OF CONTENT ........................................................................ 55

Keynote Speakers Presentation

(KS-1)  Review of Researches for Development of Sustainable Livestock Production......... 66
(KS-2)  Breeding Program of Local and Imported Beef/Dairy Cattle Breed for Development of Sustainable Livestock Production ................................................................. 72
(KS-3)  Current Analysis on Beef Self Sufficiency Program in Indonesia .......................... 78
(KS-4)  Current Development Trends in Global Broiler Production ................................. 79
(KS-5)  Feeding Management of Ruminant Animals to Reduce Their Contribution for Gas Emission ............................................................................................................. 85
(KS-6)  Manipulation of Ruminal Fermentation and Methane Mitigation by Feeding Management: Strategic Success Keys for Smallholder Dairy Farm with Environmentally Friendly ................................................................. 88

Oral Presentation 1 Focus Session: Feed and Nutrition (1)

(FN-392)  Smallholder dairy cattle farmer capacity in providing feeds and nutrient in several population densities of villages of Sleman Regency DIY Province – Indonesia .............. 95
(FN-393)  Nutritional properties of several seaweeds species for dairy cattle ....................... 98
(FN-327)  Inclusion of various levels of peanut hay (rendeng) in the rabbit diet ..................... 101
(FN-328)  The use of corn fodder for rabbit production .................................................. 104
(FN-359)  Development of beef cattle using agricultural by-product in West Java ................ 107
(FN-361)  Changes in nutrition and fibre silage water hyacinth (Eichornia crassipes) as ruminant feed fermented with several fermentative materials ........................................... 110

Oral Presentation 1 Focus Session: Feed and Nutrition (2)

(FN-374)  Performance of broiler chickens fed diets supplemented with several palm polysaccharides ................................................................................................................. 116
(FN-369)  Supplementation of the diets with rich – selenium feedstuffs on the performance of 4 weeks old broiler chickens .................................................................................. 121

55
(FN-316) Effects of different combination of water hyacinth (Eichornia crassipes mart) leaves and sapu sapu fish (Hypostomus plecostomus) on growth performances of local ducks in Lombok ................................................................. 124

(FN-317) Evaluation on the biological effectivity of BS4 enzymes in laying hens diet at commercial farms level ................................................................. 127

(FN-324) The effect of Type of Microbes and Humic Acid Does to Improve The Quality and Nutrient Contents of Palm Oil Sludge ......................................................... 130

(FN-396) Effect of probiotic supplementation in feed on meat cholesterol content and intestinal microflora of broiler ........................................................................... 131

Oral Presentation 1 Focus Session: Genetic Breeding and Conservation

(GB-106) The qualitative and quantitative characteristics identification of bali cows having different coat color in Kupang, East Nusa Tenggara, Indonesia ........................................ 136

(GB-107) Mitochondrial d-loop nucleotide sequence of indonesian gayo buffalo: variation and phylogeny studies ........................................................................... 141

(GB-109) Morphology of Indonesian native ducks 1 ................................................................ 144

(GB-111) Variation of Quantitative Traits of Kamang Duck as Local Genetic Resources in Kamang Regency West Sumatera ........................................................................ 147

(GB-112) Flock Composition, Effective Population Size, Actual Population Size And Rate of Inbreeding of Kamang Duck in Kamang Magek Regency Agam District ...................... 150

(GB-110) Polimorphism of Silkworms Bombyx mori of two Breeding Centers (Soppeng and Temanggung) in Indonesia ................................................................. 154

Oral Presentation 1 Focus Session: Livestock Production Systems

(LP-232) Chickens Population and Production and Their Contribution to Human Population in Indonesia ......................................................................................................................... 156

(LP-233) Prospects of broiler Industry in Indonesia ........................................................................................................ 159

(LP-208) Structural adaptation and concentrating capacity of ruminant kidney: buffalo, cattle and goat .......................................................................................................................... 162

(LP-211) Evaluation of alabio duckdiet (anasplatyrhynchosborneo) on the chemical composition of egg yolks at farms in distric alabio south kalimantan .............................................................................. 166

(LP-229) The effect of duration of photoperiod and light intensity toward first age of laying, feed consumption, daily egg production, and feed conversion ........................................................................... 170

(LP-212) Integrated rice-duck farming system in asia ........................................................................................................ 174

Oral Presentation 1 Focus Session: Socio-Economics and Agribusiness

(SE-718) An assessment of Indonesia’s beef supply chain ........................................................................................................ 178

(SE-701) Feasibility of sugarcane - cattle integration model in supporting farmer self-sufficiency and prosperity in Kerinci Regency, Province of Jambi, Sumatera ........................................ 179

(SE-702) Profile analysis and application of technology in the farmer’s group of ettawa crossbred goat in Yogyakarta Indonesia ............................................................................................ 184

(SE-703) Profile of farmers’ groups and its affectivity in supporting agribusiness on the smallholder beef cattle in Yogyakarta Province, Indonesia ........................................................................... 185

(SE-704) Socioeconomic and productive performance of smallholder dairy farm in Lampang Province, Northern Thailand ........................................................................................................ 186

(SE-729) Analysis of maize feed industry: a supply chain perspective ........................................................................................................ 190
(FN-367) Production and milk composition of crossbred etawah goats fed on basal diet containing different levels of sesbania (Sesbania grandiflora) leaves ............................................. 192
(FN-370) The fermentation of bagasse with fungi Ganoderma lucidum and its ligninolytic enzyme activity ........................................................................................................................................ 195
(FN-371) Encapsulated biomineral supplementation in dairy cattle ration on in vitro fermentability and digestibility .................................................................................................................. 198
(FN-372) Effect of packaging medium on survival of napier grass stem cutting .................................................................................................................................................. 202
(LP-215) Effects of Rumen Mechanical Stimulating Brush Administration on eating behavior, dry matter intake and dry matter digestibility of Brahman Cross Steers Fed with Low Forage Diet ................................................................................................................................. 205

Oral Presentation 2 Focus Session: Feed and Nutrition (2)

(FN-373) Effect of Piper retrofractum as a phytogenic feed additive for broiler performance ........ 207
(FN-375) Production performance and egg quality of laying hens on silage juice ............................ 210
(FN-376) Digestibility evaluation of microparticle protein derived from fish meal and soybean meal in broiler chicken ............................................................................................................. 214
(FN-377) Piper betle Leaf Infuse Supplementation as Herbal Antibiotic to Reduce Salmonella sp. in Small Intestine of Quail (Cortunix cortunix japonica) ......................................................... 217
(FN-381) The effect of addition mannanase enzyme in diet on broiler production performances ...... 220
(FN-344) Broiler chickens performance as affected by animal fat and plant oil under hot arid conditions of Sudan .............................................................................................................................. 223

Oral Presentation 2 Focus Session: Socio-Economics and Agribusiness

(SE-707) Development of livestock agroindustry: increasing revenue economic and employment opportunities to local society ........................................................................................................ 228
(SE-714) Urban community program of rabbit raising based on eco-friendly ................................ 231
(SE-709) Farmers’ adoption to pig intensive keeping system in Taebenu Sub District, West Timor, Indonesia .................................................................................................................................. 232
(SE-720) The empowerment of Rabbit Breeders in Lang-lang Village, Singsosari Districts, Malang City, East Java Province, Indonesia .................................................................................. 233
(SE-713) Evaluation of productivity indicators to propose broiler performance index for assessment of broiler operations ........................................................................................................... 234
(SE-727) Fresh Milk Quality and Information Availability on Local Stage in Malang Area East Java, Indonesia .............................................................................................................................. 238

Oral Presentation 2 Focus Session: Reproduction

(RP-401) Sperm quality of ongole crossbred cattle on egg yolk cauda epididymal extender during cooling process in straw ................................................................................................................................. 242
(RP-405) Semen characteristics and sperm recovery rate of Aceh bull frozen semen friendly ........ 245
(RP-414) Post-thawed semen quality of West Java local ram at different level of gliserol ............... 248
(RP-417) Effect equilibration time in the process of freezing the quality of semen Wagyu bull using diluent (R) Andromed .................................................................................................................. 252
(RP-423) The Effect of Mangosteen (Garcinia mangostana) Peel Filtrate Supplementation in Skim Milk based Diluent on Limousin Culled Semen Quality during Cooling Process ....................................................... 255
(RP-406) The acceptability of limousine bull raw semen for frozen semen production .................... 258
Oral Presentation 2 Focus Session: Processing Product

(PP-601) Meta-analysis of nutritional quality comparison between organic and conventional dairy products ................................................................. 263

(PP-603) Physical characteristics and mineral composition of bone meals produced from different body parts of cattle bones by open-air burning and limed-water cooking and limed-water cooking ................................................................. 266

(PP-604) Effect of storage time and citric acid addition on functional properties of Arabian chicken egg white ........................................................................ 269

(PP-607) The physical quality and organoleptic properties of beef meatballs in Malang, East Java, Indonesia ................................................................. 278

(PP-608) Application of porang flour for fat replacer in reduced fat mayonnaise ........................................ 721

(PP-609) Effect of canna starch (Canna edulis Ker) during refrigerator storage on syneresis, viscosity, and total plate count of yoghurt drink ........................................ 282

Oral Presentation 03: Focus Session: Feed and Nutrition (1)

(FN-302) Biological status and conservation of anoa (Bubalus depressicornis) in tropical forest of North Sulawesi ................................................................. 284

(FN-349) The nutritional value evaluation of ammoniated rice straw and fermented sago dregs in complete feed on performances of ongole cross breed cattle ........................................................................ 287

(FN-389) Potential Source of Feedstuffs From Oil Palm Plantation Areas For Development of Cattle Production in Indonesia ................................................................. 288

(FN-395) Methane reduction strategy with fat supplementation for development of sustainable ruminant livestock production in East Asia ........................................................................ 291

(FN-397) Study of the effect of fortification of herbs to multinutrient feed block on rumen fermentation and total gas production in vitro ........................................................................ 295

(FN-359) Development of beef cattle using agricultural by-product in West Java ............... 297

(RP-407) Nutritional responses on the hypothalamic-pituitary-ovarian axis on female goats ....... 300

Abstract

Melanocortin 4 Receptor (MC4R) is one of candidates gene for growth traits and feed intake in mammals. The objective of this research was to identify the genotype of Menocortin 4 Receptor gene in Bligon goat. Blood samples from 40 Bligon goats were used for DNA extraction. Primer used was designed from Capra hircus genome in Genbank Accession Number NM_001285591. Primer CapraPF: 5’-ATTTCCAAGTGATGCCGACC’3 and CapraPR: 5’-CTCCAACAAGCTGATGACCC’3 were used to amplify 387 bp of PCR product. Using DNA sequencing, a Single Nucleotide Polymorphism (SNP) was detected in Bligon goat. The SNP identified in this research was g.256 G/A. The results of DNA sequence of PCR product in Bligon goats were used for restriction map of specific enzyme using Bioedit version 7.2.0. Based on restriction mapping, HpyCH4V (A’CG_T) was detected to recognize SNP region. Restriction enzyme HpyCH4V can be used for genotyping of targeted gene using PCR-RFLP method and it will be associated with growth traits and feed intake in Bligon goat.

Keywords: Melanocortin 4 Receptor (MC4R), Bligon Goat, PCR, sequencing, restriction enzyme

Introduction

Among the various types of local livestock, goats were the most reared livestock in Indonesia (Murdjito, et al., 2011). Various of goat breeds in Indonesia include Kacang, Peranakan Etawa (PE), Bligon, Kejobong, Gembrong, Marica, Samosir, Muara and Bengal goats (Hartatik, 2014). The goat which have widely reared was Bligon goats. Bligon goat is breed by crossing local Kacang with Perananakan Etawah goats and they have a blood profile over 50% of Kacang goat (Budisatria, et al., 2012).

The growth of goat affected by genetic and environmental factors, as well as both of the interaction. Genetic factors that encode growth traits can be passed down to offspring, so it can be used in livestock breeding programs. Over the past decades, molecular genetics has found candidate genes with have large effects on growth traits one of which is a melanocortin 4 receptor.

Melanocortin 4 receptor (MC4R) gene in goats located in chromosome 24 based assesion number NC_022316.1 (Anonymous, 2015). MC4R gene is part of a seven-transmembrane G protein receptor in the brain, especially the double in the hypothalamus (Dubern, 2015). MC4R gene has an important role in regulating feed intake, energy balance and body weight in mammals (Liu et al (2010); Song, (2012)). MC4R gene is also involved in sympathetic nerve activity, adrenal, thyroid function, media work leptin in regulating energy
balance and homeostasis (Zhang et al, 2008). Polimorfisme the MC4R gene associated with growth traits and feed intake in pig (Fontanesi, et.al, (2013), in cattle (Liu et al (2010) and sheep (Song, (2012); Wang et al (2015)). However no reported the gene study identified in Bligon goats. Therefore, the aimed of study was to identify the SNPs of MC4R gene in Bligon goat.

**Metodology**

**Blood sampling and Isolation DNA.** The blood samples were collected using K3EDTA vacutainer containing about 3 mL for each goat through the jugular veins of 40 goats in Gunung Kidul, Yogyakarta. Samples of blood then isolated using SYNC™ DNA Extraction Kit (Genetika Science Indonesia).

**Primer design.** Primers were designed using oligoprimer primer3 software after alignment DNA sequens of MC4R gene based on Genbank Acc. No. NM_001285591, JN 107563.1, JN 58091, NM_001126370.2, JQ710684.1 and EU622853.2 to seek the position of the single nucleotide polymorphism (Hartatik, 2016). We used Genbank NM_001285591 as a template. Primers were used in the study are listed on the Table.1.

**Amplification DNA.** The DNA fragments of MC4R gene was amplified using PCR (Polymerase Chain Reaction) method. PCR was performed with the target MC4R gene in a total reaction volume of 30 mL comprising 10μl DDW, primer F and R, respectively: 1,5μl, PCR kit (KAPPABIOSYSTEMS) 15 mL and 2μl DNA. DNA Amplification was done as many as 35 cycles with temperature of predenaturation 94 °C for 3 minutes, denaturation 94 °C for 30 seconds, annealing 55,9 °C for 30 seconds, extention 72 °C for 30 seconds and followed by a final extension 72 °C for 10 minutes.

**Sequencing.** PCR products of 40 samples were sequenced using the same primer, CapraPF and CapraPR. Sequencing analysis was performed using 1st BASE services through PT. Genetika Science Indonesia.

**Analysis of DNA sequences in Bioedit.** Identification of single nucleotide polymorphisms (SNPs) was performed by using Bioedit ver. 7.2.5.

**Result and Discussion**

A total 387 bp MC4R gene was amplified using primers designed. Multiple sequence alignment for 40 of Bligon goat were performed with Bioedit program to identify SNPs. There was no polymorphism found in all samples. As a results only one genotype was identified for this fragment of MC4R gene in this study. The possible reason for that monomorphic in this study may because of the low genetic diversity in the population study due to the rotation of male goat in the flocks was not well organized.

![Figure 1. The SNPs identified in MC4R gene by compred with Capra hircus (JN 107563.1)](image)

The g.104C/G and g.121T/C SNPs were identified in 5’untranslated region in this study (Figure 1). In other studies, four variation in the promoter region were detected in bovine (Zhang, et. al. 2009). Liu, et. al. (2010) reported five SNPs in 5’UTR and one SNP in
exon were identified in cattle and found the significant association of -129A/G in 5’ untranslated region with growth traits.

**Conclusion**

The present study of MC4R gene in Bligon goat was monomorphic with directly sequencing. Two SNPs were detected in the 5’UTR region of MC4R gene in Bligon goat compared to Capra hircus (JN 107563.1).
