The Journal of Habitat Engineering and Design (JHED) is the official journal of the International Society of Habitat Engineering and Design (ISHED). The Journal of Habitat Engineering and Design is a peer-reviewed journal and open to research and discussion papers in habitat studies, urban design and planning, architecture, sociology, economy, culture, psychology, and environmental issues of significance to the international community. It welcomes original contributions of a theoretical or empirical nature, and also manuscripts describing a case study through the performance, assessment, and contribution to habitational and environmental issues to form the basis of broader theories and concepts. The articles should engage the interests of non-specialist readers as well, who should be able to grasp the significance of these genres of research.
